Site review — frosted white, feathered panel, intro and wordmark, last names, no credit lines

2026-10-29 · branch kozmoz-v1 · captured from the dev server (localhost:3100) with Playwright · desktop 1440×900, phone 390×844 at 2× (close-ups at 2× and 3×).
Full pages are captured with reduced motion on (settled: no scroll effects, work cards on their stills, the white's still version); intro, name and edge close-ups with motion on.
For the full-page stills only, the white, which is fixed to the screen, is laid over the whole page height so it doesn't end after the first screen.

Page heights (before this round → now)

	Desktop 1440	Phone 390
/	4383 → 4307	4629 → 4559
/services	2420 → 2394	3336 → 3214
/work	2175 → 2175	4253 → 4254
/work/clinical-scribe	5630 → 5630	5786 → 5788

1 · Background: frosted white

- Ground rgb(250, 250, 249) (#FAFAF9) on every page; five soft ellipses of pearl #FFFFFF, pale silver #EBEDF0 and warm grey #EEEBE6 at 40–95% strength, drifting on 61–127 s cycles; grain an SVG noise tile at 50% soft-light. No gold anywhere in it. Theme colour #FAFAF9.
- Reduced motion: the canvas is none; the CSS still shows. Without scripting: 5 still CSS shapes, canvas opacity 0, intro display none, hero names opacity 1.
- Frame rate (headless Chromium, 1440×900): 60 fps at rest on / and /services with the canvas drawing every 50 ms (about 4 ms of script per 3 s); scrolling /services 60 fps, worst gap 16.8 ms. Scrolling the home page drops frames only while its work videos decode in software (headless has no GPU decode): the same 153 slow frames of 285 with the mask, the shadow and the canvas each switched off, and none with the videos hidden.

2 · Panel: faded edge, soft neutral shadow

- Desktop 1440: inset 28px left / 28px right / 28px top; corners 20px; paper rgb(244, 241, 234); fading band 16px (6 mask layers: two side ramps, four corner rings on the radius); shadow cast from 16px inside the panel: rgba(28, 28, 30, 0.1) 0px 0px 80px -20px, rgba(28, 28, 30, 0.07) 0px 32px 120px -24px. No edge line. Header half way down each page at top 0 / 0 / 0 / 0, after scrolling back up 300px 0 / 0 / 0 / 0. Page width vs screen: 1440/1440, 1440/1440, 1440/1440, 1440/1440.
- Phone 390: inset 12px left / 12px right / 12px top; corners 14px; paper rgb(244, 241, 234); fading band 9px (6 mask layers: two side ramps, four corner rings on the radius); shadow cast from 9px inside the panel: rgba(28, 28, 30, 0.1) 0px 0px 40px -10px, rgba(28, 28, 30, 0.07) 0px 16px 60px -12px. No edge line. Header half way down each page at top -86 / -86 / -86 / -86, after scrolling back up 300px 0 / 0 / 0 / 0 (phones: steps aside on the way down, back on the way up, as before). Page width vs screen: 390/390, 390/390, 390/390, 390/390.
- Desktop 1440 edge, brightness every 3 CSS px side: from the screen edge in: 246 247 246 245 246 244 244 243 242 242 242 239 239 239 240 240 240 … (paper 240; lowest 239, within 2 of the paper: no dark rim); right: from the screen edge in: 247 247 245 245 244 243 245 241 242 240 240 239 239 240 240 240 … (paper 240; lowest 239, within 2 of the paper: no dark rim).
- Phone 390 edge, brightness every 2 CSS px side: from the screen edge in: 249 249 249 249 247 246 246 244 241 240 240 240 … (paper 240; lowest 240, within 2 of the paper: no dark rim); right: from the screen edge in: 249 248 246 245 246 244 243 241 240 240 240 … (paper 240; lowest 240, within 2 of the paper: no dark rim).

3 · Intro and wordmark

- Desktop 1440 intro: logo 560×115; definition “elorro · noun · two people who listen first, then build what adds real value to your business.” in Cormorant Garamond 500 19.0px, rgb(0, 0, 0), line-height 27.6px, 2 lines, centred yes; 37px logo → rule, 37px rule → definition; tagline element present: no (1 line under the logo).
- Phone 390 intro: logo 312×64; definition “elorro · noun · two people who listen first, then build what adds real value to your business.” in Cormorant Garamond 500 16.5px, rgb(0, 0, 0), line-height 23.9px, 2 lines, centred yes; 22px logo → rule, 22px rule → definition; tagline element present: no (1 line under the logo).
- Wordmark before: header Cormorant Garamond 500, 23.1px, tracking 9.69px (.42em), ring mark 28.8px; footer 19.2px. Now, desktop: header: Cormorant Garamond 600, 26.5px, tracking 9.55px (0.36em), gradient rgb(190, 150, 69) → rgb(168, 128, 47) → rgb(135, 97, 34), fallback colour rgb(168, 128, 47); ring mark 33.0px; footer: Cormorant Garamond 600, 22.1px, tracking 7.96px (0.36em), gradient rgb(190, 150, 69) → rgb(168, 128, 47) → rgb(135, 97, 34), fallback colour rgb(168, 128, 47); ring mark 26.5px.
- Phone: header: Cormorant Garamond 600, 20.3px, tracking 7.31px (0.36em), gradient rgb(190, 150, 69) → rgb(168, 128, 47) → rgb(135, 97, 34), fallback colour rgb(168, 128, 47); ring mark 33.6px; footer: Cormorant Garamond 600, 22.4px, tracking 8.08px (0.36em), gradient rgb(190, 150, 69) → rgb(168, 128, 47) → rgb(135, 97, 34), fallback colour rgb(168, 128, 47); ring mark 26.9px.

4 · Hero last names

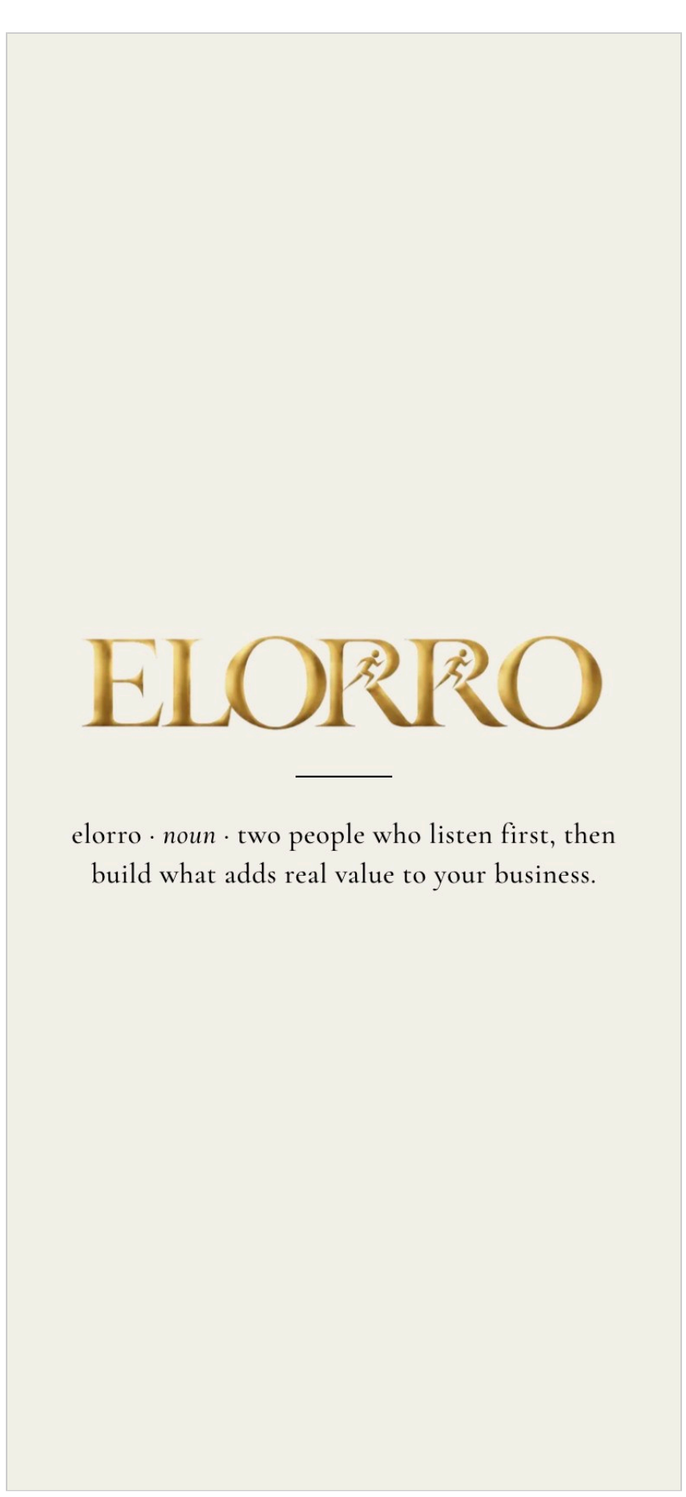

- Desktop 1440: Ashan Fernando — last letter's ink ends -0.01px from the first name's (Cormorant Garamond 700 36.5px rgb(156, 111, 31); first name rgb(156, 111, 31)); picked band 13.28px above the last name's capitals; Jordan Lopez — last letter's ink ends -0.01px from the first name's (Cormorant Garamond 700 36.5px rgb(14, 127, 163); first name rgb(14, 127, 163)); picked band 13.28px above the last name's capitals. Lede 36.5px. Band on the first name: yes, on the last: no. Tapping “Fernando” picks Ashan: aria-pressed true, band 100% 64.5867px. Buttons named “Ashan Fernando” 1, “Jordan Lopez” 1. Header names: “Ashan & Jordan” (header button named just “Ashan”: 1).
- Phone 390: Ashan Fernando — last letter's ink ends 0.00px from the first name's (Cormorant Garamond 700 26.4px rgb(156, 111, 31); first name rgb(156, 111, 31)); picked band 8.94px above the last name's capitals; Jordan Lopez — last letter's ink ends -0.01px from the first name's (Cormorant Garamond 700 26.4px rgb(14, 127, 163); first name rgb(14, 127, 163)); picked band 8.94px above the last name's capitals. Lede 26.4px. Band on the first name: yes, on the last: no. Tapping “Fernando” picks Ashan: aria-pressed true, band 100% 32.7936px. Buttons named “Ashan Fernando” 1, “Jordan Lopez” 1. Header names: “Ashan & Jordan”.

5 · What we do: credit lines

- Credit lines on the four pages: 0. The `credit` field, the Credit component and .svc-card-credit / .svc-credit are gone; the home grid's rows close up from 3rem to 2.5rem on desktop.

The intro (/?intro, motion on, settled: desktop 1449 ms in, phone 1517 ms in)

Hero names close up — at rest and picked (Ashan on desktop, Jordan on the phone). Below: each name's end at 2–3×, the red hairline drawn at the measured ink edge of the first name's final n (capture only)

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

TELL US WHAT'S GOING ON

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

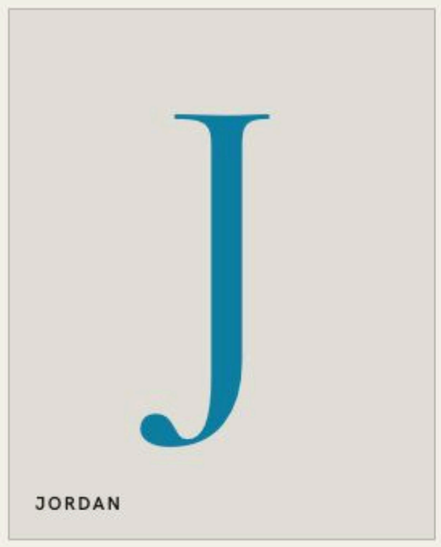

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

You own the site, the domain and the data from day one.

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

WHAT WE DO

Websites.

The site itself, made so the people who find you can call, book or buy. You own it.

Photo & video.

Your place, your people and your product, shot on location and cut for your site and your posts.

Getting found.

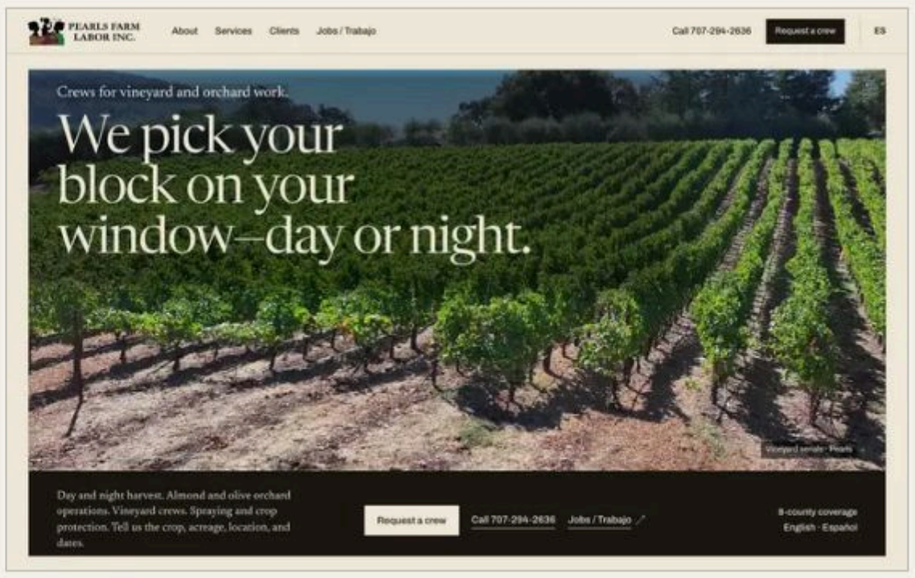

Google, local search and ads, set up and tracked so you can see what each one brings in.

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the calendar, and follow-up that goes out without anyone having to remember.

WHAT WE DO

Websites.

The site itself, made so the people who find you can call, book or buy. You own it.

- Designed around how your customers call, book or buy
- Fast on phones, on your own domain
- Kept up every month, not handed off and forgotten

Photo & video.

Your place, your people and your product, shot on location and cut for your site and your posts.

- We come to you for the shoot
- Photos and short video cut for your site, Google and Instagram
- New content every month, so your pages don't go stale

Getting found.

Google, local search and ads, set up and tracked so you can see what each one brings in.

- Your Google listing set up and kept current: hours, photos, review replies
- Local search done properly on the site itself
- Ads when they make sense, with what each one brings in tracked

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the calendar, and follow-up that goes out without anyone having to remember.

- A line that answers when you can't and books the appointment
- Booking tied into how you already schedule
- Follow-up texts that go out on their own, plus custom tools for how you work

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

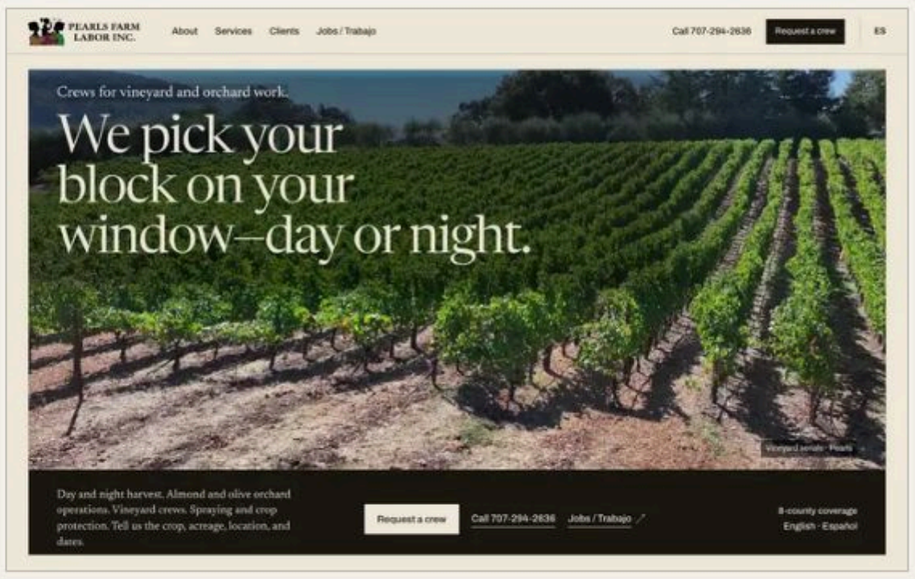

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

CLINICAL SCRIBE · CONSULT CAPTURE AND FOLLOW-UP

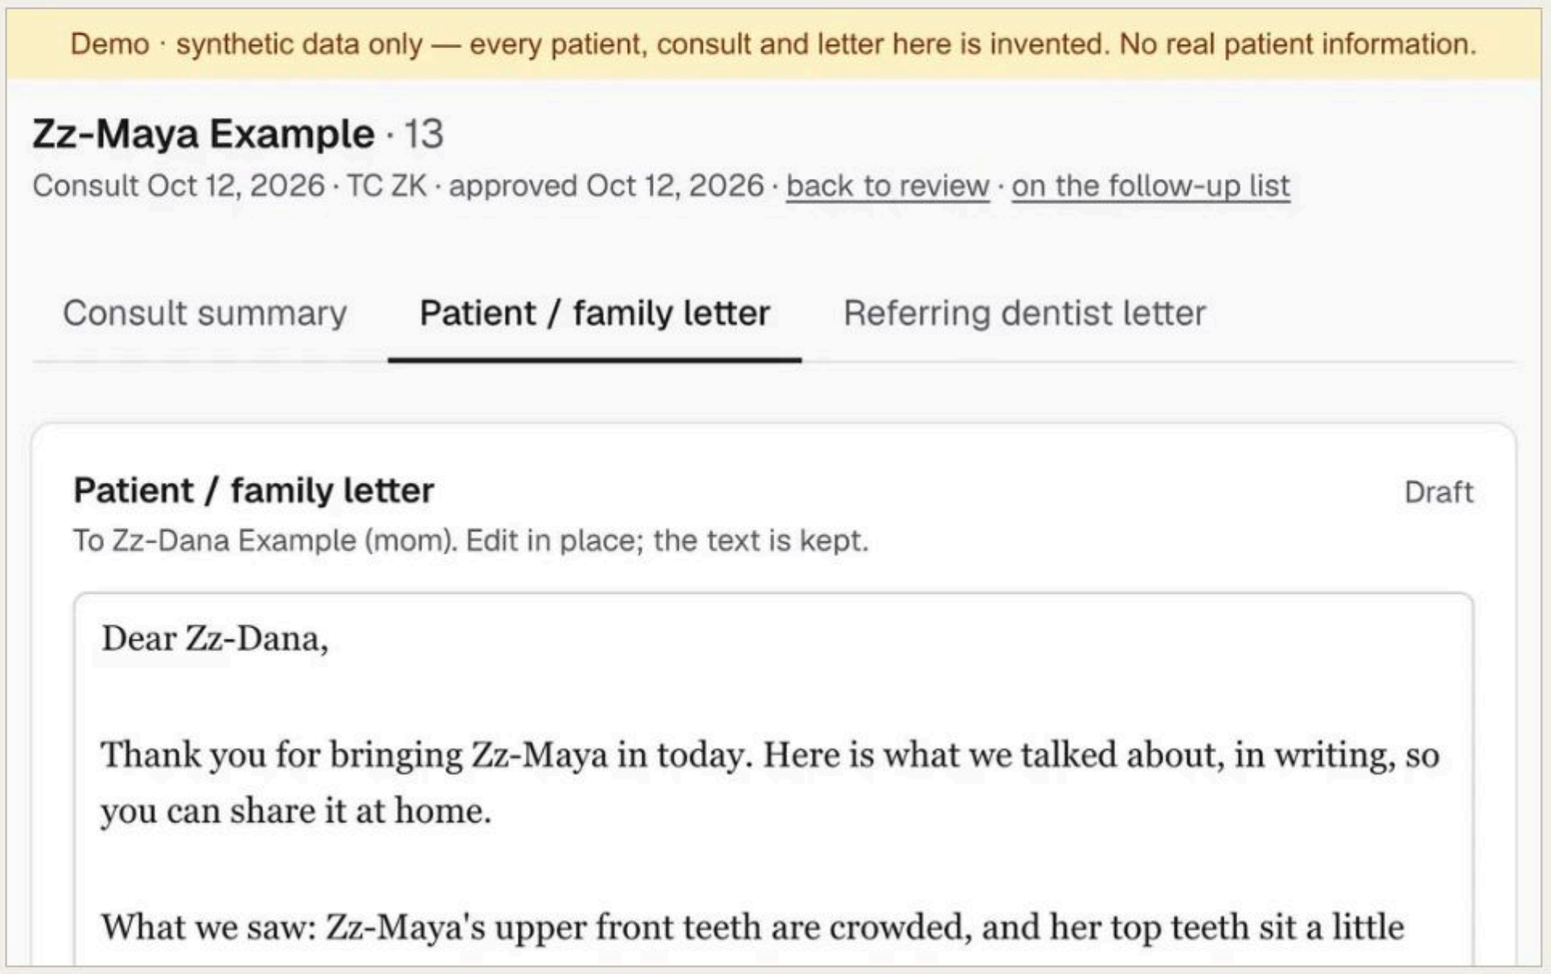

The consult decides the case, and nothing said in it survives the room.

Clinical Scribe is built to record the consultation, draft the letters that come out of it, and keep what was said somewhere the practice can look at it.

CLIENT
Orthodontic practice

STATUS
Built, entering pilot testing

Records the consultation.	Drafts the doctor letter and the patient take-home letter from it.	Surfaces the patterns across consults.

DEMO DATA One made-up consult from start to finish: recorded, summarized, both letters drafted, then the follow-up messages. The app's own screens, rebuilt with invented patients.

01 THE PROBLEM

The patient says they'll think about it, and the practice never hears what about.

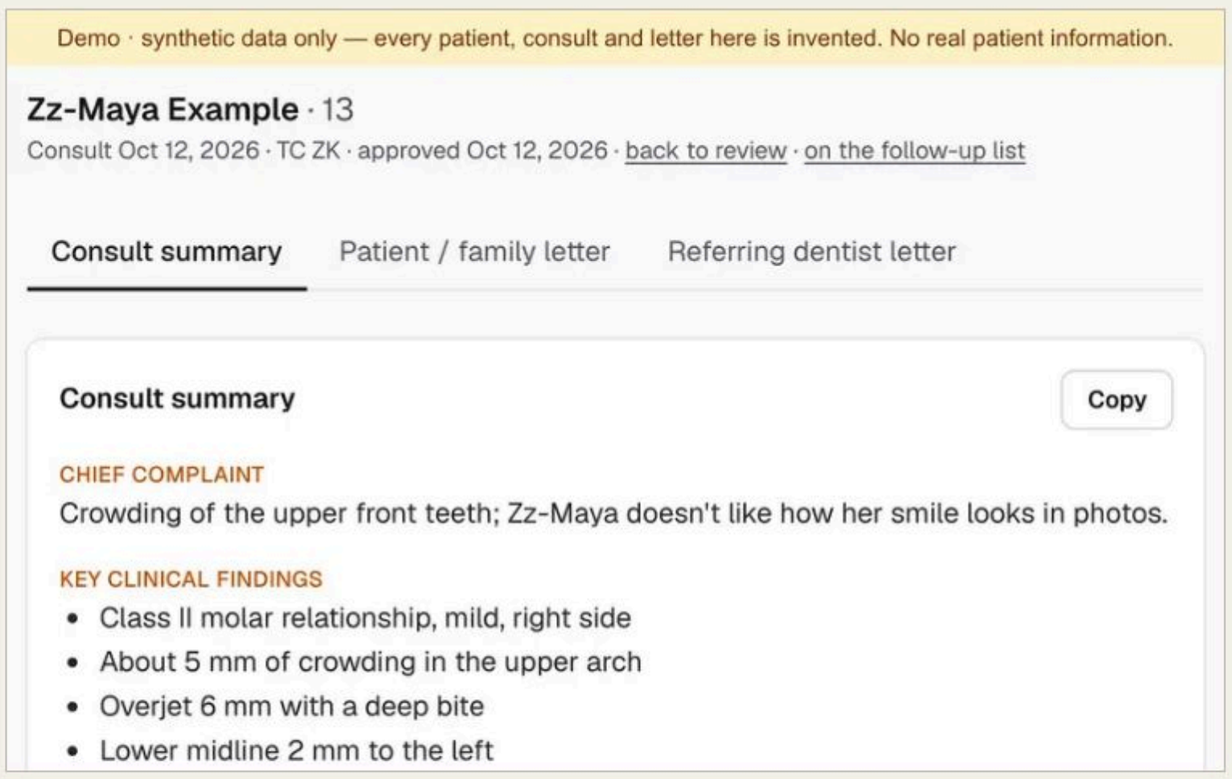

Which objection came up, what got explained, where the hesitation actually started: by the time anyone needs to know, it's down to memory. Follow-up is whatever the coordinator remembers days later, written from a blank text box.

---

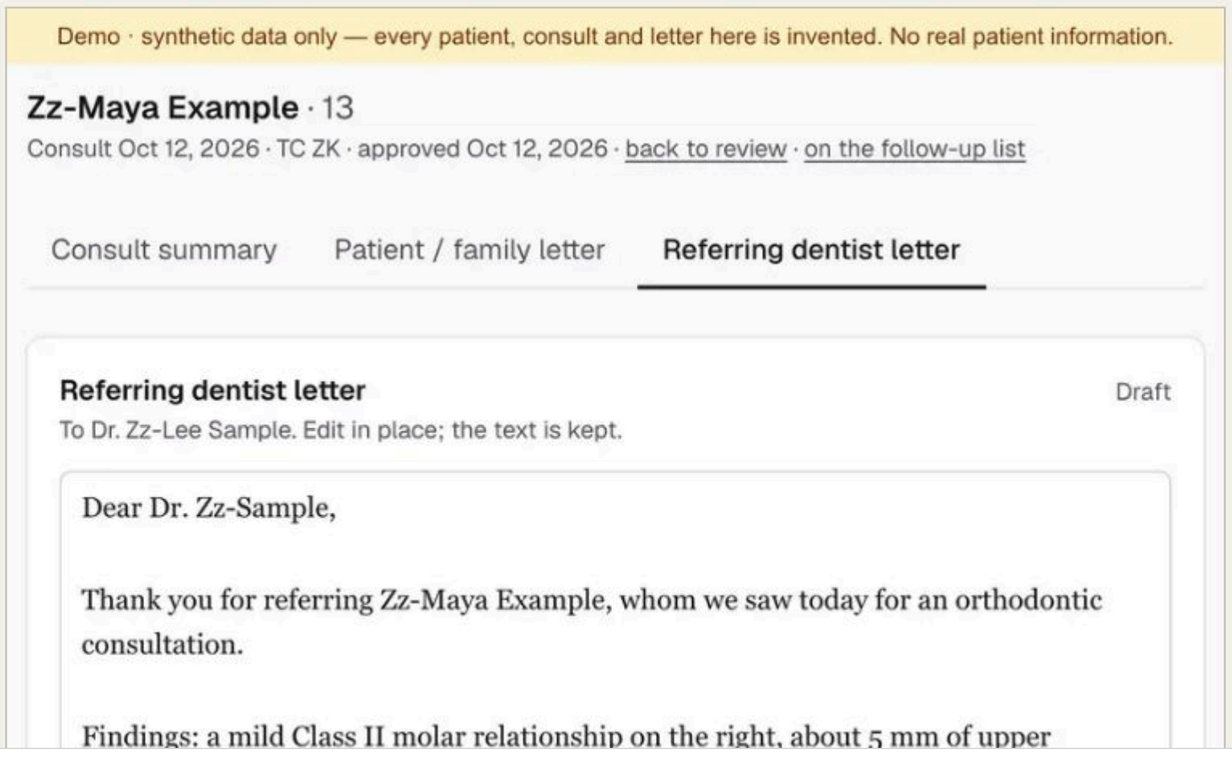

02 THE BUILD

One recording, a summary, and the letters that follow from it.

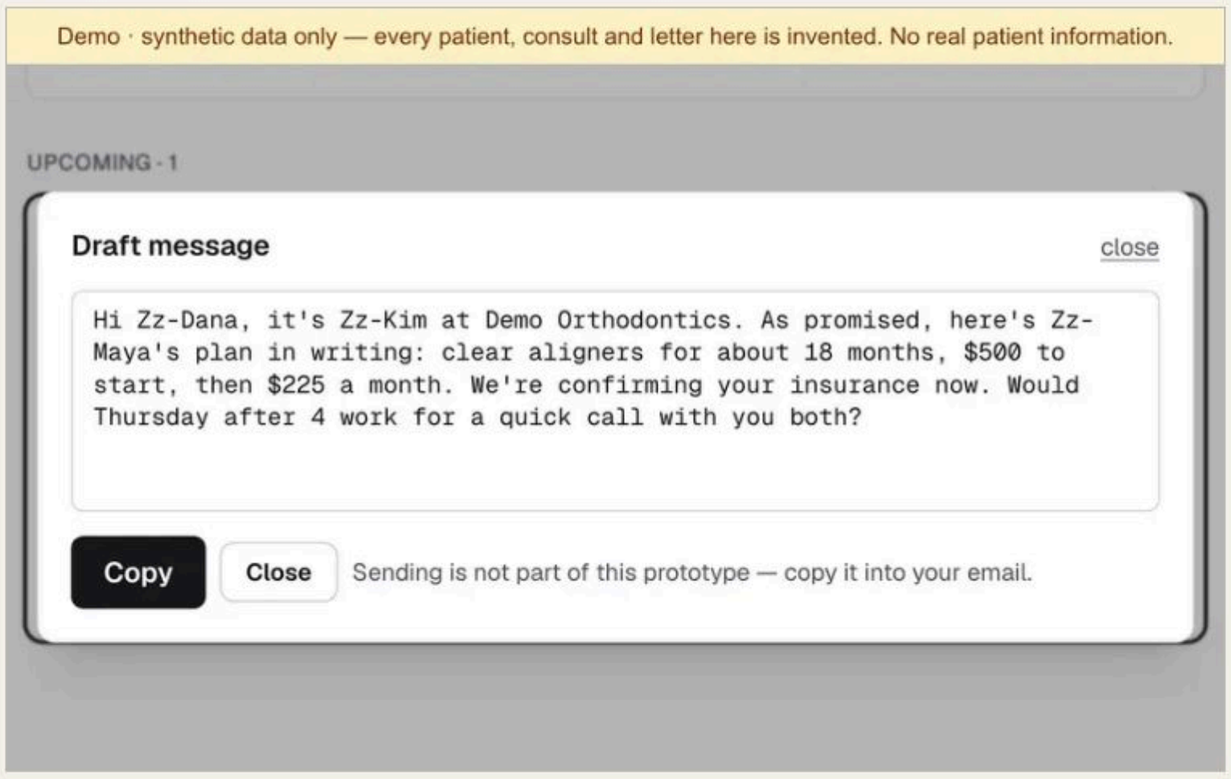

The system records the consultation and produces a summary of it. From that summary and the exam findings it drafts both letters — the doctor letter and the patient take-home letter — each in its own register. When a patient does not sign that day, it gives the coordinator a few follow-up messages she can read, pick, edit and send, written from what was actually said in the consult rather than from a blank box.

DEMO DATA The summary of the consult, drafted from the recording.

DEMO DATA The doctor letter, drafted from the summary and the exam findings.

DEMO DATA Follow-up messages to pick, edit and send when a patient doesn't sign that day.

---

03 THE RESULT SO FAR

Built, and about to be tested on real consults.

Clinical Scribe is built and is being prepared for a pilot on a few real consults. There are no outcomes to report yet: how accurate the summaries are, how much the letters need editing, and whether the same hesitations really do show up across consults are what the pilot is for.

HOW WE APPROACHED IT

The point was never note-taking. Notes are a by-product. The point is that a practice can tell you its close rate to a decimal place and cannot tell you why the people who said no actually said no. So we started from the conversation itself: capture what was said, and let the letters and the follow-up come from that instead of from someone's memory of it.

HANDLING PATIENT DATA

- Designed from the start for HIPAA-conscious handling of protected health information.
- The clinical system runs on dedicated HIPAA-eligible infrastructure, not general consumer services.
- Patient data never passes through consumer AI tools.
