Site review — phone Work one swipe at a time; the contact section's words; the rise after the “&”

2026-10-29 · branch kozmoz-v1 · dev server (localhost:3100), Playwright Chromium · desktop 1440×900 and phone 390×844 at 2× (header close-ups at 2× and 3×). Full pages: reduced motion, so everything is settled (the phone's Work is then the row to swipe; the pin has its own page). Intro and entrance frames: the page's clock slowed 12× and stopped for each capture, stamped in the page's own ms. Mouse frames, the pin and the hover close-up: real time.

This round · 1 · Phone Work: one swipe, one card

- Under 768px, once Work reaches the top it holds, and every swipe moves the row exactly one card: up or right to left for the next, down or left to right for the one before, by whichever way the swipe mostly went. 30 px is enough, or a flick (12 px within 220 ms). The row glides to the next card's middle over 450 ms (an ease-out) and takes no more input until it's there. On the last card a swipe up lets the page carry on into Contact; on the first, a swipe down lets it go back up into What we do (sideways, it's taken 0.6 of a screen that way). Arriving from above it holds on the first card, from below on the last, however fast the swipe was. While it's held, swipes are taken from the page (only then); everywhere else the page scrolls as it always has. A scroll that ends between cards some other way (a wheel, keys) settles on the nearer.
- How it was checked: real touch input (Chrome's own touch pipeline, CDP touch events, a 390×844 phone), each swipe followed by the page's position measured in cards (0 = Pearls … 3 = Cubic Ship) and which card sits centred:

Swipe	Where it landed (cards)	Centred card	Loops
1 quick swipe in from above (550px): held on card 1	0	1	playing/still/still/still
2 short swipe up (40px): card 2	1	2	still/playing/still/still
3 right-to-left swipe (100px): card 3	2.001	3	still/still/playing/still
4 slow 35px swipe up: card 4	3	4	still/still/still/still
5 swipe up on the last card: let go into Contact	4.034	— (the page, let go: stage top -610px)	still/still/still/still
6 quick swipe down from Contact (680px): held on the last card	3	4	still/still/still/still
7 too short and slow (20px down): stays	3	4	still/still/still/still
8 flick down (12px in 80ms): card 3	2.001	3	still/still/playing/still
9 two quick swipes down, 100ms apart: card 2 only	1	2	still/playing/still/still
10 slow 295px drag up (half a card of the old pin): card 3	2.001	3	still/still/playing/still
11 two left-to-right swipes: card 1	0	1	playing/still/still/still
12 left-to-right on card 1: let go up into What we do	-0.857	— (the page, let go: stage top 506px)	playing/still/still/still
13 quick swipe up into the section again: held on card 1	0	1	playing/still/still/still
14 swipe down on card 1: the page goes up	-0.518	— (the page, let go: stage top 306px)	playing/still/still/still

- The half-swipe case: a slow 35 px swipe (4) and a slow 295 px drag (10, half a card's scroll in the old pin) each landed on exactly the next card; a slow 20 px one (7) stayed; two quick swipes 100 ms apart (9) moved one card. Every position measured inside the section is a whole number of cards (to 0.001).
- Cubic Ship has no phone loop yet, so on card 4 nothing plays. The progress line by the WORK label moves with the card.

This round · 2 · The contact section's words

- Desktop 1440: home — “Book a call, let’s talk.” / “One of us writes back to set up a 30-minute call. Just us two and you.”; /services/websites-and-getting-found — “Book a call, let’s talk.” / “One of us writes back to set up a 30-minute call. Just us two and you.”. The form's field still reads “What’s going on”.
- Phone 390: home — “Book a call, let’s talk.” / “One of us writes back to set up a 30-minute call. Just us two and you.”; /services/websites-and-getting-found — “Book a call, let’s talk.” / “One of us writes back to set up a 30-minute call. Just us two and you.”. The form's field still reads “What’s going on”.
- The case study (/work/clinical-scribe) heads its contact section with its own question, so it's unchanged: “Could you say why your last ten no's said no?” / “If the answer is in what gets said during the consult, that's the problem this was built for. Tell us how yours run and we'll tell you whether it's the same shape.”. No page title or description repeated the old line.

This round · 3 · The rise waits for the “&” (ms from the black clearing)

Step	ms
Ashan and Jordan start writing, together	0
Ashan's second letter in; Jordan's (the later): the “&” starts to drop	207; 254
Ashan ends; the F of Fernando starts	648
The “&” lands; the hint, the lede and the button start to rise	**704; 704**
Jordan ends; the L of Lopez starts	1000
Fernando and Lopez end together	1800 / 1800
The rise ends: finished	1704

- The rise is the same 1000 ms on the same easing (hint at 704, button at 704); everything before it is unchanged. Real time: a wheel or a click during the entrance still finishes it at once (1 / 1); reduced motion shows everything at once (1).

The whole timeline, from the first paint

Desktop 1440	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 427 ms: logo 0.86)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 67.3294% at 1405 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4772 ms, two-thirds at 4939 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.26 s–7.06 s: finished
The “&” drops in, once both first names have their second letter	5.51 s–5.96 s
The hint, the lede and the button rise in together, as the “&” lands	**5.96 s–6.96 s**, the names still writing

Phone 390	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 423 ms: logo 0.85)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 66.4043% at 1401 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4767 ms, two-thirds at 4940 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.25 s–7.05 s: finished
The “&” drops in, once both first names have their second letter	5.50 s–5.96 s
The hint, the lede and the button rise in together, as the “&” lands	**5.96 s–6.96 s**, the names still writing

As before, re-captured

Last round (84bac83)

- The two rings over the intro's black; the trail laid on as it is over the header's black bar; the gold buttons lighter at the top (#BE9645), 4.7:1 or more behind the capitals; keyboard focus a thin ink ring.

The gold cursor trail (c5f0283)

- A fine gold thread behind the rings while the mouse moves: the pointer's last 12 positions at most, none older than 260 ms, never longer than 140 px; 2.6 px wide behind the rings, tapering to nothing; the gold type's golds, at most 55% opaque; gone within 260 ms of stopping. Mouse or trackpad only.

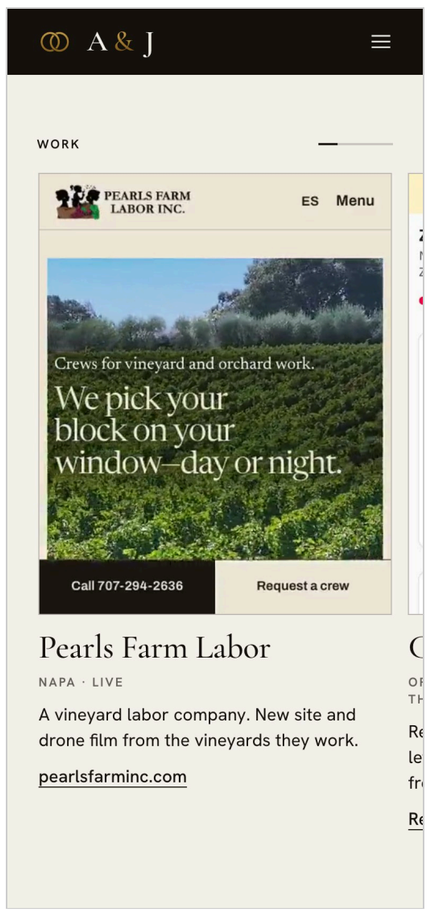

The longer hold

- Desktop 1440: the line settled (120%) at 2005 ms and still there, untouched, at 4161 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.28 s.
- Phone 390: the line settled (120%) at 2001 ms and still there, untouched, at 4156 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.28 s.

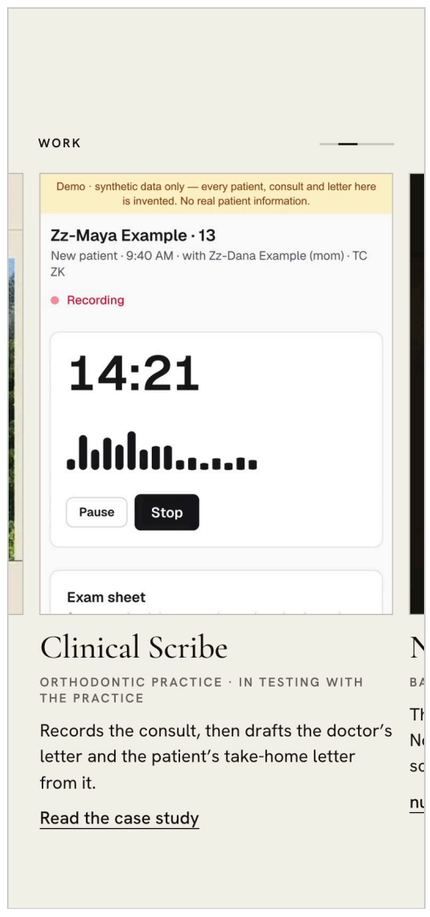

The mouse bend

- Rebuilt: the logo is redrawn one screen pixel column at a time (2× here, so 2 columns to a CSS px), each column taking its slice of the logo from where a smooth bend says it came from, moved up or down and stretched a touch. The bend: a slow ripple of up to 4 px and a swell of up to 2.5 px around the pointer, with a drag of up to 2.5 px along its motion, falling off smoothly to nothing 144 px from it (at 1440 wide); it glides after the pointer, comes in over 0.35 s and

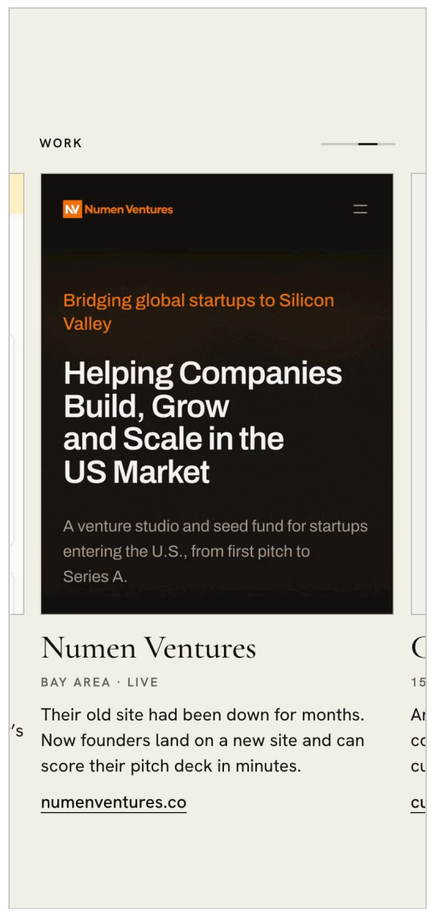

Phone Work (390, real touch input, loops on) — entering; after a short swipe up; after a right-to-left swipe; the last card; released into Contact

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

BOOK A CALL, LET'S TALK

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

You own the site, the domain and the data from day one.

A

ASHAN

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

J

JORDAN

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

WHAT WE DO

Websites & getting found.

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

Phones, booking & follow-up.

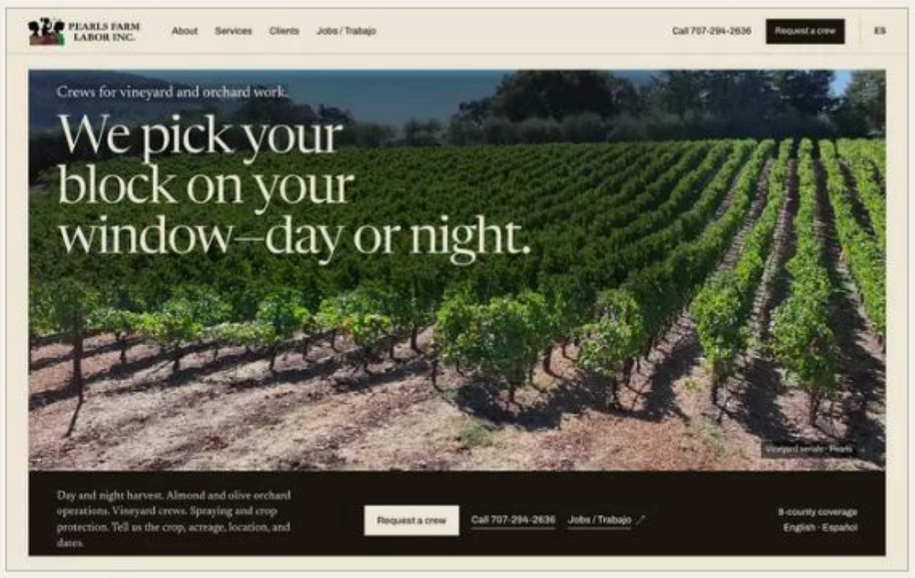

A line that answers when you can’t, booking that fills the calendar, and follow-up that goes out on its own.

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

SEE ALL SERVICES

- A line that answers when you can't and books the appointment
- Booking tied into how you already schedule
- Reminders and follow-up texts that go out without anyone

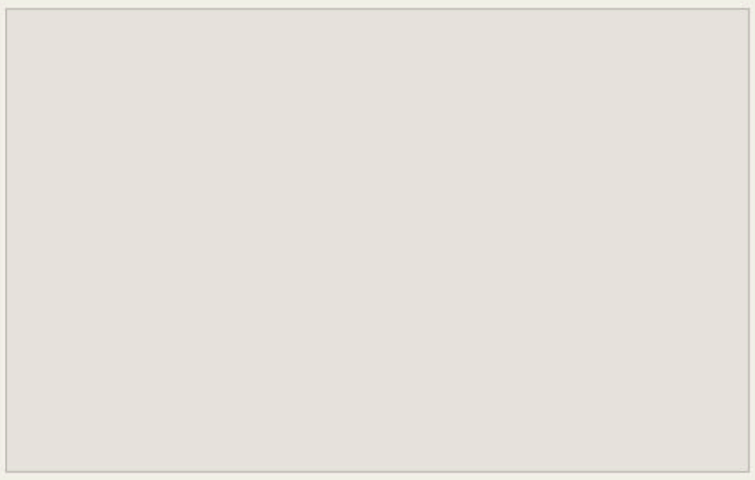

calendar, and follow-up that goes out on its own.

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- Built for one problem in your business, not a generic app
- Fits the tools and records you already use
- Tested with your team before anyone relies on it
- Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

BOOK A CALL, LET'S TALK

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain	Search done properly: your Google listing, local SEO and the pages behind them	Set up to show up in AI search, when people ask ChatGPT who to call	Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says plainly what you do, where and for whom, and that

your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says

about you, so we make sure your site says plainly what you do, where and for whom, and that your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

WORK

CONTACT

Book a call, let's talk.

One of us writes back to set up a 30-minute call. Just us two and you.
