Site review — a gold trail behind the cursor

2026-10-29 · branch kozmoz-v1 · dev server (localhost:3100), Playwright Chromium · desktop 1440×900 and phone 390×844 at 2× (header close-ups at 2× and 3×). Full pages: reduced motion, so everything is settled (the phone's Work is then the row to swipe; the pin has its own page). Intro and entrance frames: the page's clock slowed 12× and stopped for each capture, stamped in the page's own ms. Mouse frames, the pin and the hover close-up: real time.

This round · 1 · The hero's entrance: the “&” drops in after the names start (ms from the black clearing)

Step	ms
Ashan and Jordan start writing, together (no wait)	0
Ashan's second letter is in	207
Jordan's second letter is in (the later): **the “&” starts to drop**	254
Ashan ends; the F of Fernando starts; **the hint, the lede and the button start to rise**	648
The “&” lands	704
Jordan ends; the L of Lopez starts	1000
The rise ends	1648
Fernando and Lopez end together: finished	1800 / 1800

- The names now start the moment the black has cleared (was 400 ms in); the same 1.8 s, the same letter-by-letter writing, both ending together. The “&” drops in when both first names have their second letter (Ashan's at 207 ms, Jordan's at 254 ms; the later): from 0.2 of its own size above its place, falling in over 450 ms on cubic-bezier(0.2, 1.15, 0.35, 1) (a soft ease-out that passes its place by well under a pixel, then settles), fading up over its first 157 ms. The rise is unchanged and still starts at the F, now at 648 ms (was 1048), over 1000 ms.
- As the timings fall, the F (648 ms) comes 56 ms before the “&” lands (704 ms), so the lines start rising just as it settles.
- Real time: a wheel or a click during the entrance finishes it at once (1 / 1); repeat visits run the same sequence from load; reduced motion shows everything at once (1); an intro cut short leaves the hero finished (1).

This round · 2 · The buttons' gold, lighter at the top

- The same fall, top to bottom, the same foot (#6D4F1C), text and hover; the top stop is now the “&”'s light gold, #BE9645 (was #9A7A38), and the mid gold (#886826) now sits at 36% (was 38%), above the capitals. Behind the capitals, from the pixels: at rest 4.72–5.32:1 (was 4.68–5.25), hovered 5.87–6.54:1 (was 5.81–6.45), “Send it” 4.72–5.17:1 (was 4.66–5.15). Every gold button, “Send it” too.
- Keyboard focus: a thin ink ring just clear of the button (1px solid rgb(22, 19, 15), 3px off), with the deeper gold; tabbed to: focus-visible true; clicked with the mouse: focus-visible false. No gold button sits on black anywhere today, so the paper-coloured ring for black grounds has nowhere to apply yet.

This round · 3 · The rings and the trail over the black

- The two rings are now the pointer over the intro's black too (it no longer sets its own arrow): over the intro, the cursor is the rings.
- Over the header's bar once it has turned black, the thread is drawn on a second canvas, laid on as it is (multiply / normal), only inside the bar: 845 pixels there in the capture; real time, 61 sampled (normal). On the paper it still multiplies, so letters stay whole.
- Still: drawn while moving (62), gone 400 ms after stopping (0), no frames drawn with the mouse at rest (0); none with the menu open (0) or over a text box (0); hidden under reduced motion and on touch.

The whole timeline, from the first paint

Desktop 1440	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 425 ms: logo 0.85)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 66.6349% at 1403 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4769 ms, two-thirds at 4941 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.25 s–7.05 s: finished
The “&” drops in, once both first names have their second letter	5.51 s–5.96 s
The hint, the lede and the button rise in together, as the F of Fernando starts	**5.90 s–6.90 s**, the names still writing

Phone 390	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 423 ms: logo 0.85)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 66.4058% at 1402 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4772 ms, two-thirds at 4939 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.25 s–7.05 s: finished
The “&” drops in, once both first names have their second letter	5.51 s–5.96 s
The hint, the lede and the button rise in together, as the F of Fernando starts	**5.90 s–6.90 s**, the names still writing

As before, re-captured

The gold cursor trail (c5f0283)

- A fine gold thread behind the rings while the mouse moves: the pointer's last 12 positions at most, none older than 260 ms, never longer than 140 px; 2.6 px wide behind the rings, tapering to nothing; the gold type's golds, at most 55% opaque; gone within 260 ms of stopping. Mouse or trackpad only.

The longer hold

- Desktop 1440: the line settled (120%) at 2003 ms and still there, untouched, at 4158 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.28 s.
- Phone 390: the line settled (120%) at 2002 ms and still there, untouched, at 4161 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.28 s.

The mouse bend

- Rebuilt: the logo is redrawn one screen pixel column at a time (2× here, so 2 columns to a CSS px), each column taking its slice of the logo from where a smooth bend says it came from, moved up or down and stretched a touch. The bend: a slow ripple of up to 4 px and a swell of up to 2.5 px around the pointer, with a drag of up to 2.5 px along its motion, falling off smoothly to nothing 144 px from it (at 1440 wide); it glides after the pointer, comes in over 0.35 s and dies away over 0.5 s where it was when the pointer leaves the logo. No strips, so no seams; nothing moves more than a few pixels, so no letter or runner comes apart.
- entering, onto the E (2732 ms, pointer at 451, 370): 4858 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- mid-bend, over the O and the R (3766 ms, pointer at 701, 370): 8635 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- settling, the pointer gone down onto the black (4137 ms, pointer at 701, 733): 4868 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- Only with a mouse (hover and a fine pointer) and without reduced motion; never on touch.

Page heights (c5f0283 → now)

	Desktop 1440	Phone 390
/	4214 → 4214	4525 → 4525 (with the pin: 6675)
/services	3459 → 3459	4354 → 4354
/services/websites-and-getting-found	3603 → 3603	4852 → 4852
/work	2119 → 2119	4207 → 4207

1 · No panel

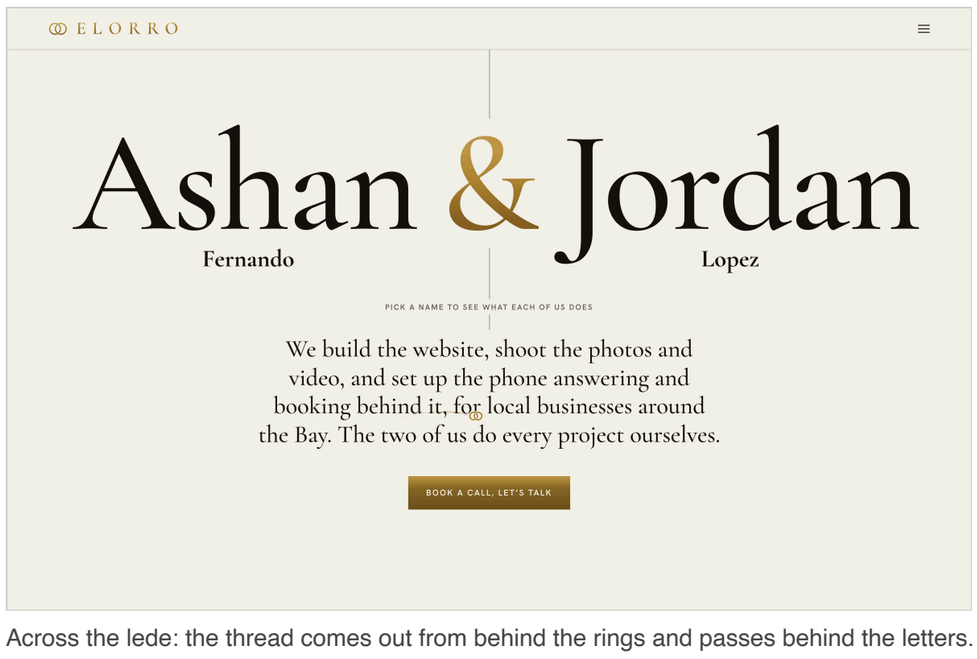

- Panel, frosted white and their canvas on 8 page captures: 0 elements (panel.tsx and art.tsx deleted, their CSS gone). Page root padding: 0px. html rgb(244, 241, 234), body rgb(244, 241, 234). Theme colour #F4F1EA.
- Screen edges, scrolled into /services/websites-and-getting-found: desktop 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234; phone 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234 (the paper is 244,241,234).
- Layout and widths kept: the root size is still worked out from the screen less the old margin (15.378px at 1440, 15.616px at 390), and that margin is now part of every side margin, so the page's grid sits at x 143.3–1296.7 (desktop) and 27.6–362.4 (phone), the header's rings at x 58.8 / 27.6: where they were inside the panel. No horizontal scroll: none on any page.

2 · The menu

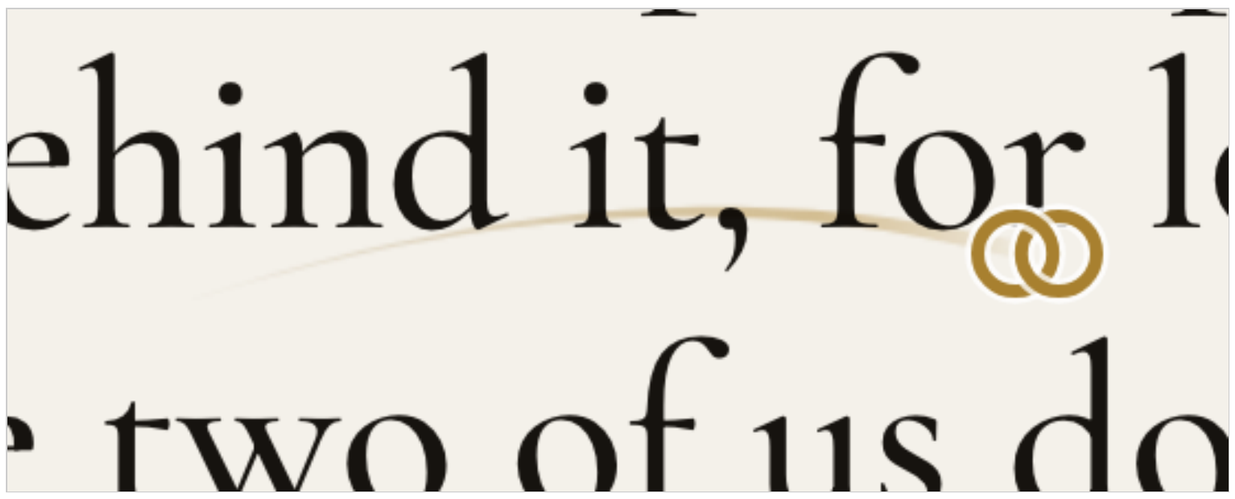

- Desktop 1440: header links inline 0. Open: a modal dialog (true), rgb(244, 241, 234), sections Us, What we do, Work, Contact in Cormorant Garamond 500 76.9px rgb(22, 19, 15); pages All services (/services), All work (/work); focus

The rings and the gold trail (desktop 1440, mid-movement, the page's clock stopped for each capture; the rings drawn in, as a screenshot has no cursor)

On the paper

Across the lede: the thread comes out from behind the rings and passes behind the letters. At most 0.52 opaque.

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

BOOK A CALL, LET'S TALK

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

You own the site, the domain and the data from day one.

A

ASHAN

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

J

JORDAN

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

WHAT WE DO

Websites & getting found.

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

Phones, booking & follow-up.

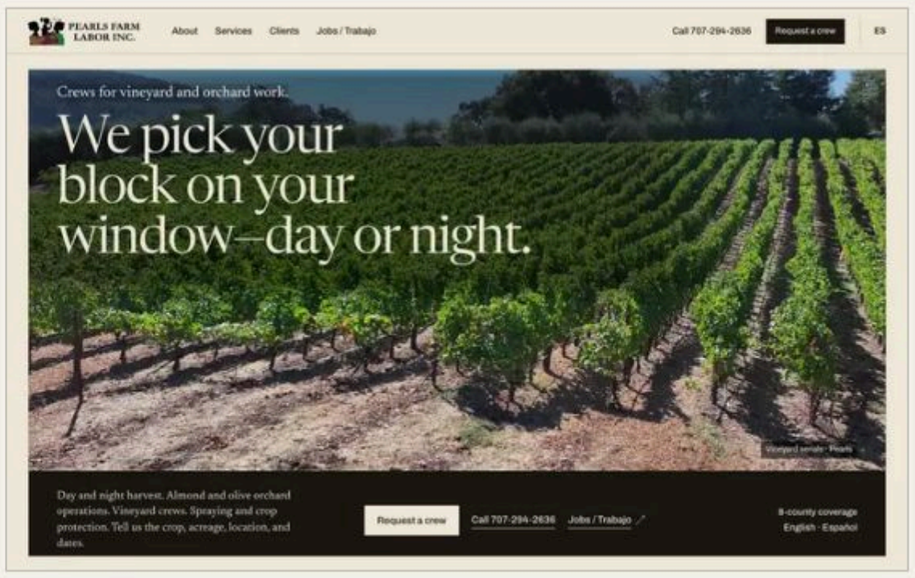

A line that answers when you can’t, booking that fills the calendar, and follow-up that goes out on its own.

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- A line that answers when you can't and books the appointment
- Booking tied into how you already schedule
- Reminders and follow-up texts that go out without anyone

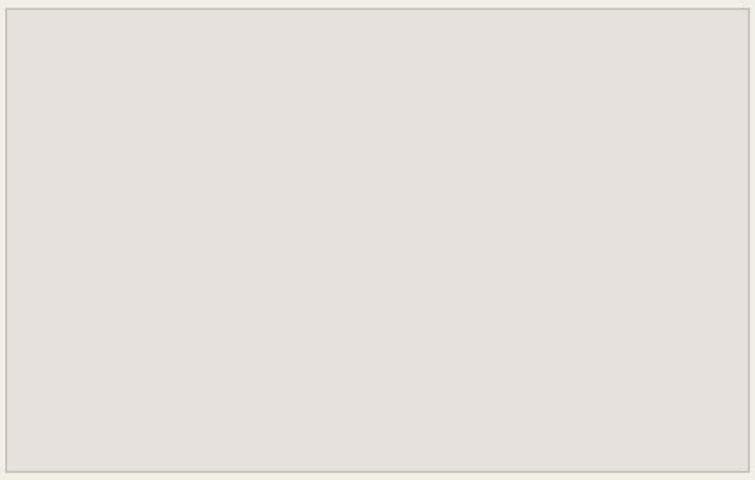

calendar, and follow-up that goes out on its own.

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- Built for one problem in your business, not a generic app
- Fits the tools and records you already use
- Tested with your team before anyone relies on it
- Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

BOOK A CALL, LET'S TALK

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain	Search done properly: your Google listing, local SEO and the pages behind them	Set up to show up in AI search, when people ask ChatGPT who to call	Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says plainly what you do, where and for whom, and that

your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

Set up to show up in AI search, when people ask ChatGPT who to call

Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says

about you, so we make sure your site says plainly what you do, where and for whom, and that your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

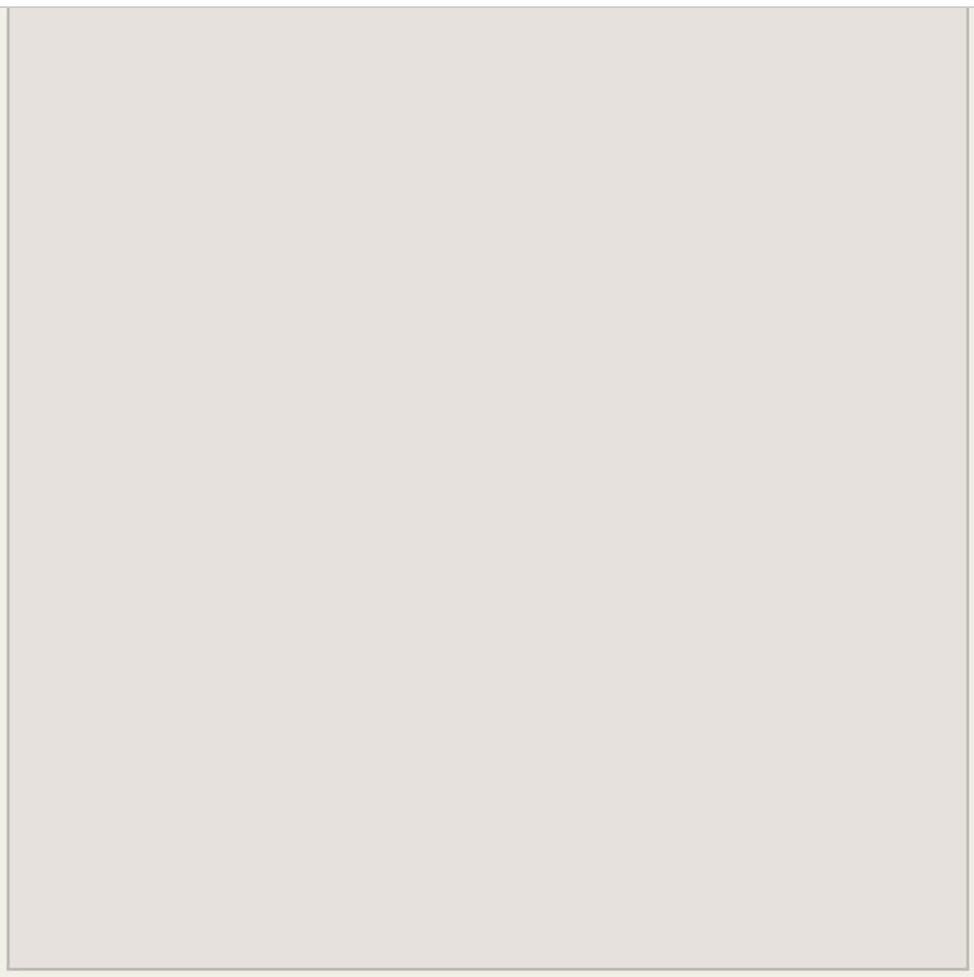

05 EVERY MONTH

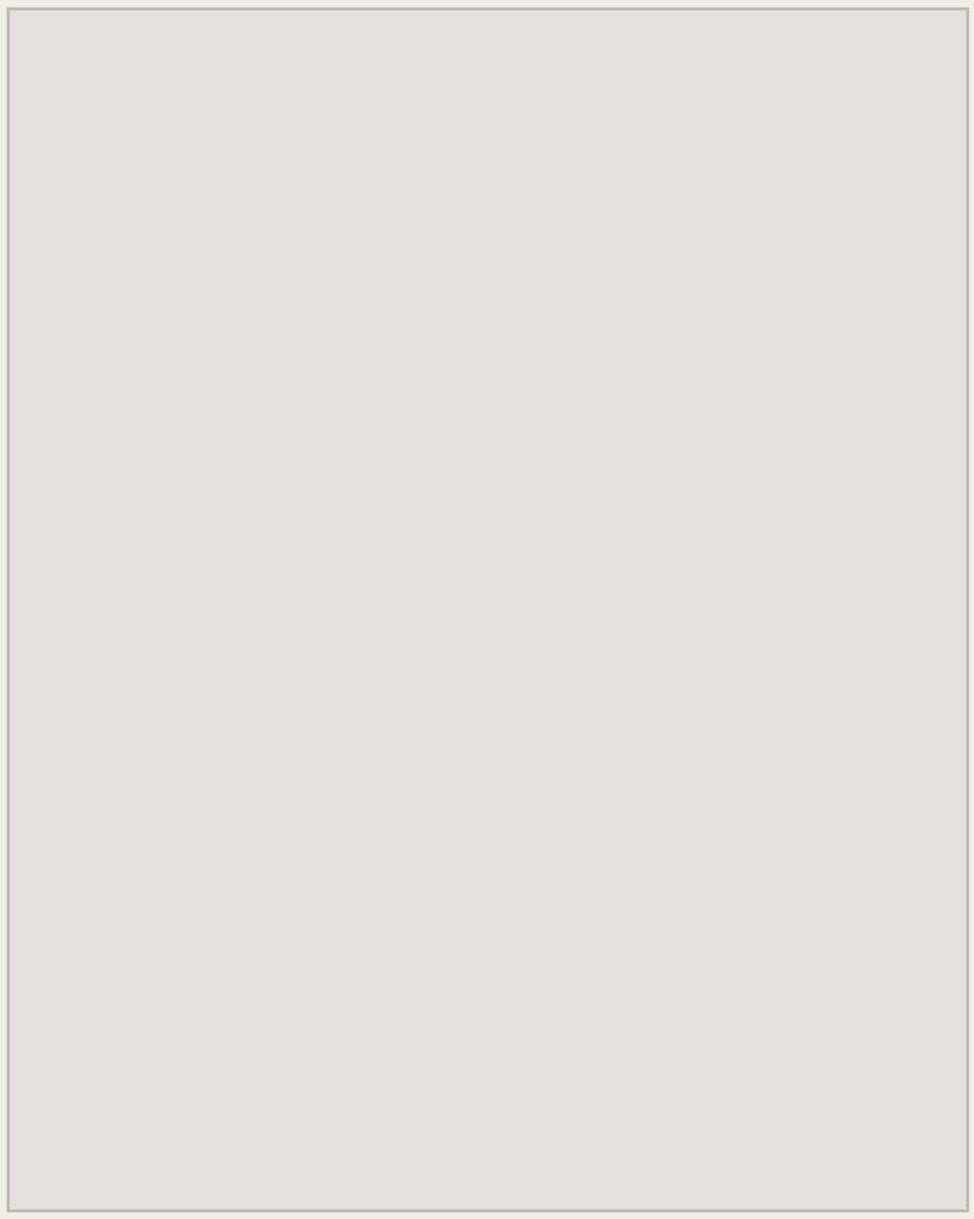

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

WORK

CONTACT

Tell us what’s going on.

One of us writes back to set up a 30-minute call. No sales rep, no pitch deck.
