Site review — the intro logo's shine, slower

2026-10-30 · branch kozmoz-v1 · dev server (localhost:3100), Playwright Chromium · desktop 1440×900 and phone 390×844 at 2× (header close-ups at 2× and 3×). Full pages: reduced motion, so everything is settled (the phone's Work is then the row to swipe; the pin has its own page). Intro and entrance frames: the page's clock slowed 12× and stopped for each capture, stamped in the page's own ms. Mouse frames, the pin and the hover close-up: real time.

This round · The shine, slower

Sweep	From the first paint	Strength
The logo fades in	0.15–0.75 s	
The first sweep, gliding across the word	**0.85–2.45 s (1.6 s, was 0.9 s)**	full
The second sweep, during the hold	**2.8–4.3 s (1.5 s, was 0.9 s at 3.2–4.1 s)**	55%
The line and rule dim out	4.2–4.45 s	
The black starts to slide (the shine is gone by then)	4.45 s	

- Both sweeps on the same smooth ease-in-out, the same band, strength and clipping as before; the second now starts at 2.8 s (was 3.2 s) so that, slower, it still ends 0.15 s before the black starts to slide: it's never cut off. Nothing else in the intro moved: the logo's fade-in, the line's burn, the hold, the slide and the flight. Reduced motion: no sweep.
- Desktop 1440, measured (band position, 0 = off the left, 100 = off the right): the first sweep 25 at 1417 ms, 50 at 1651 ms, 75 at 1885 ms; the second 25 at 3330 ms (strength 0.55), 51 at 3553 ms (strength 0.55), 75 at 3770 ms (strength 0.55); as the black slides, the shine is gone.
- Phone 390, measured (band position, 0 = off the left, 100 = off the right): the first sweep 25 at 1414 ms, 51 at 1653 ms, 75 at 1887 ms; the second 25 at 3327 ms (strength 0.55), 50 at 3544 ms (strength 0.55), 75 at 3767 ms (strength 0.55); as the black slides, the shine is gone.

Last round (c8ee44f)

- The new polished-gold logo (1695×287, shown up to 680 px, served full size at 2× and for 3× phones), its gold shine, and your link preview images and site address.

Earlier (89acf71)

- Phone Work: a hard stop on the way in — however fast the fling, it stops exactly on Pearls coming down and on Cubic Ship coming up (19 flings in Chromium and WebKit, all exact).

The whole timeline, from the first paint

Desktop 1440	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 461 ms: logo 0.89)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 59.6357% at 1361 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (43% across at 4815 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.25 s–7.05 s: finished
The “&” drops in, once both first names have their second letter	5.51 s–5.96 s
The hint, the lede and the button rise in together, as the “&” lands	**5.96 s–6.96 s**, the names still writing

Phone 390	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 458 ms: logo 0.89)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 59.399% at 1358 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (43% across at 4816 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.25 s–7.05 s: finished
The “&” drops in, once both first names have their second letter	5.51 s–5.96 s
The hint, the lede and the button rise in together, as the “&” lands	**5.96 s–6.96 s**, the names still writing

As before, re-captured

Last round (84bac83)

- The two rings over the intro's black; the trail laid on as it is over the header's black bar; the gold buttons lighter at the top (#BE9645), 4.7:1 or more behind the capitals; keyboard focus a thin ink ring.

The gold cursor trail (c5f0283)

- A fine gold thread behind the rings while the mouse moves: the pointer's last 12 positions at most, none older than 260 ms, never longer than 140 px; 2.6 px wide behind the rings, tapering to nothing; the gold type's golds, at most 55% opaque; gone within 260 ms of stopping. Mouse or trackpad only.

The longer hold

- The hold runs 1.95–4.2 s (2.25 s), unchanged; the second shine falls inside it.

The mouse bend

- Rebuilt: the logo is redrawn one screen pixel column at a time (2× here, so 2 columns to a CSS px), each column taking its slice of the logo from where a smooth bend says it came from, moved up or down and stretched a touch. The bend: a slow ripple of up to 4 px and a swell of up to 2.5 px around the pointer, with a drag of up to 2.5 px along its motion, falling off smoothly to nothing 144 px from it (at 1440 wide); it glides after the pointer, comes in over 0.35 s and dies away over 0.5 s where it was when the pointer leaves the logo. No strips, so no seams; nothing moves more than a few pixels, so no letter or runner comes apart.
- entering, onto the E (2723 ms, pointer at 434, 370): 5254 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- mid-bend, over the O and the R (3755 ms, pointer at 700, 370): 8409 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- settling, the pointer gone down onto the black (4147 ms, pointer at 700, 733): 4797 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- Only with a mouse (hover and a fine pointer) and without reduced motion; never on touch.

Page heights (c5f0283 → now)

	Desktop 1440	Phone 390
/	4214 → 4214	4525 → 4525 (with the pin: 6468)
/services	3459 → 3459	4354 → 4354
/services/websites-and-getting-found	3603 → 3603	4852 → 4852
/work	2119 → 2119	4207 → 4207

1 · No panel

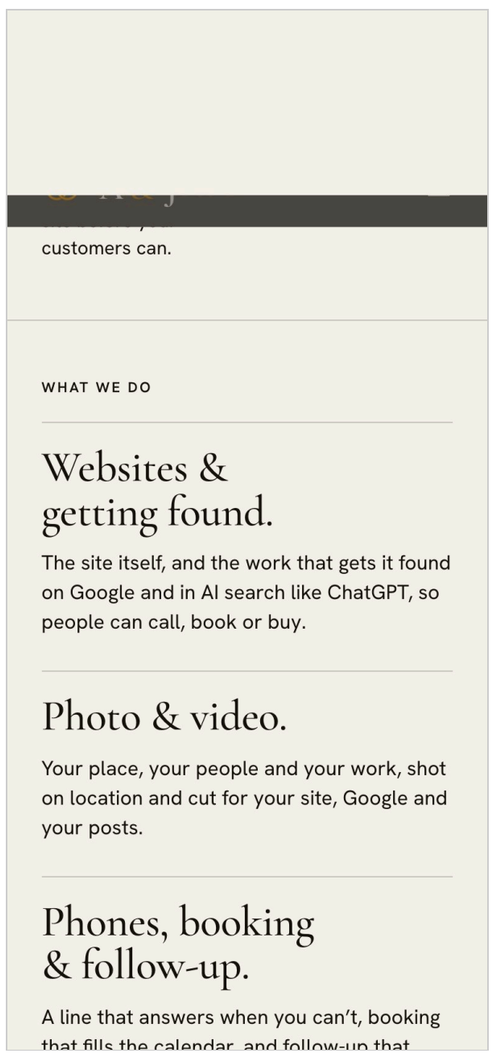

- Panel, frosted white and their canvas on 8 page captures: 0 elements (panel.tsx and art.tsx deleted, their CSS gone). Page root padding: 0px. html rgb(244, 241, 234), body rgb(244, 241, 234). Theme colour #F4F1EA.
- Screen edges, scrolled into /services/websites-and-getting-found: desktop 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234; phone 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234 (the paper is 244,241,234).
- Layout and widths kept: the root size is still worked out from the screen less the old margin (15.378px at 1440, 15.616px at 390), and that margin is now part of every side margin, so the page's grid sits at x 143.3–1296.7 (desktop) and 27.6–362.4 (phone), the header's rings at x 58.8 / 27.6: where they were inside the panel. No horizontal scroll: none on any page.

2 · The menu

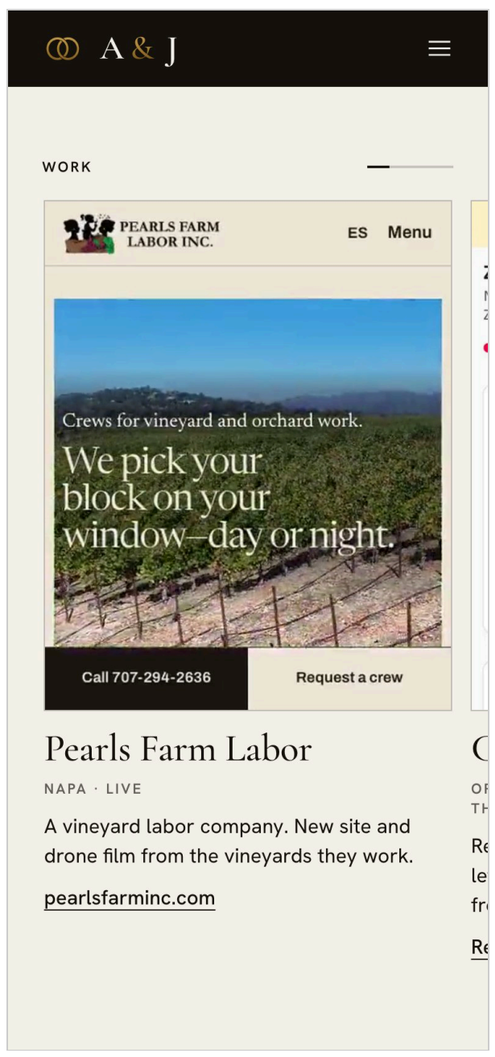

- Desktop 1440: header links inline 0. Open: a modal dialog (true), rgb(244, 241, 234), sections Us, What we do, Work, Contact in Cormorant Garamond 500 76.9px rgb(22, 19, 15); pages All services (/services), All work (/work); focus on “Close”; page overflow hidden. Escape: open false, focus back on “Menu”, overflow visible.
- Phone 390: header links inline 0. Open: a modal dialog (true), rgb(244, 241, 234), sections Us, What we do, Work, Contact in Cormorant Garamond 500 50.8px rgb(22, 19, 15); pages All services (/services), All work (/work); focus on “Close”; page overflow hidden. Escape: open false, focus back on “Menu”, overflow visible.
- Also checked: Tab and Shift+Tab go round the menu's 8 stops and never leave it; the wheel doesn't scroll the page behind; a section link closes it and scrolls there (/#work); a page link closes it and goes (/work); on /services, “All services” is marked as the current page; on a service page Contact stays on the page.

Phone Work: fast flings in, from above to Pearls and from below to Cubic Ship — Chromium and WebKit (iPhone 13)

Chromium · from 5 screens above, a 12,000 px/s fling

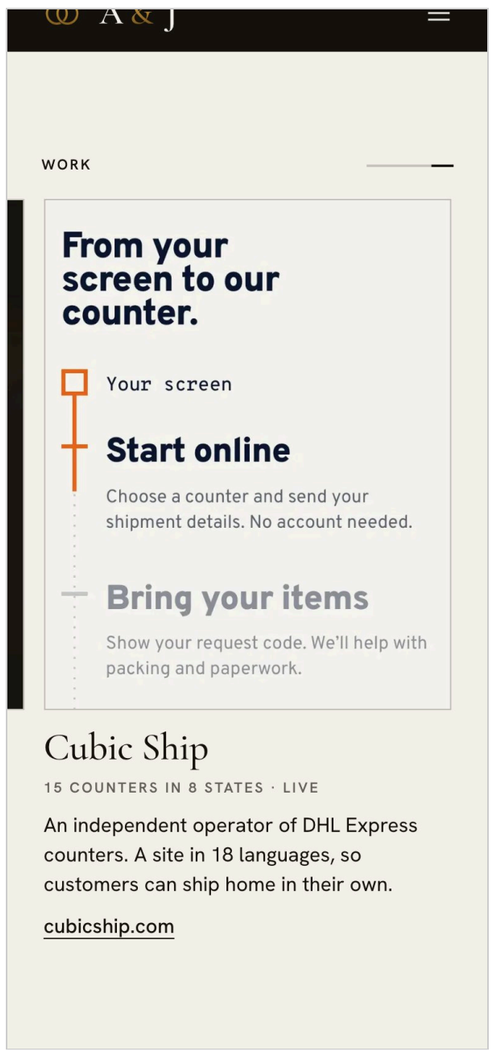

Shortly after the swipe (already held, where the momentum was quick)

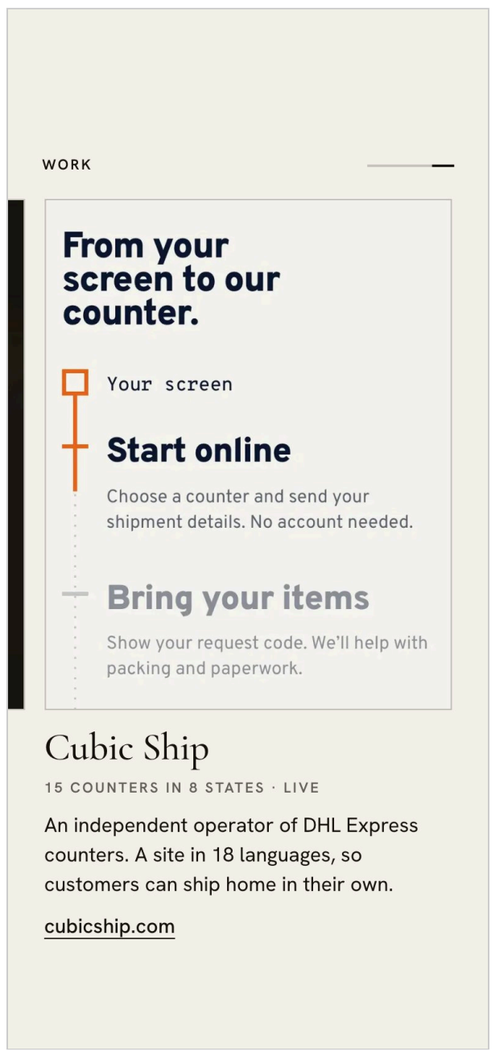

Landed: 0 cards, card 1 centred, held by overflow; the row's place stayed 0–0

Chromium · from 2 screens below, a 9,000 px/s fling

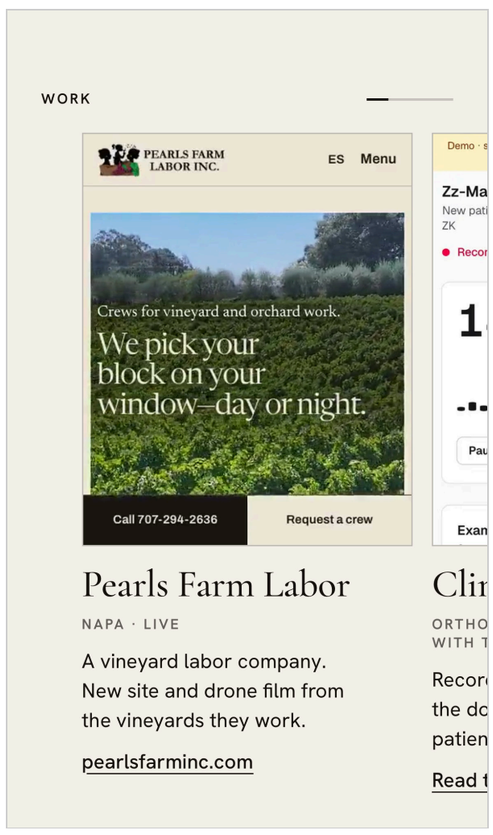

Shortly after the swipe (already held, where the momentum was quick)

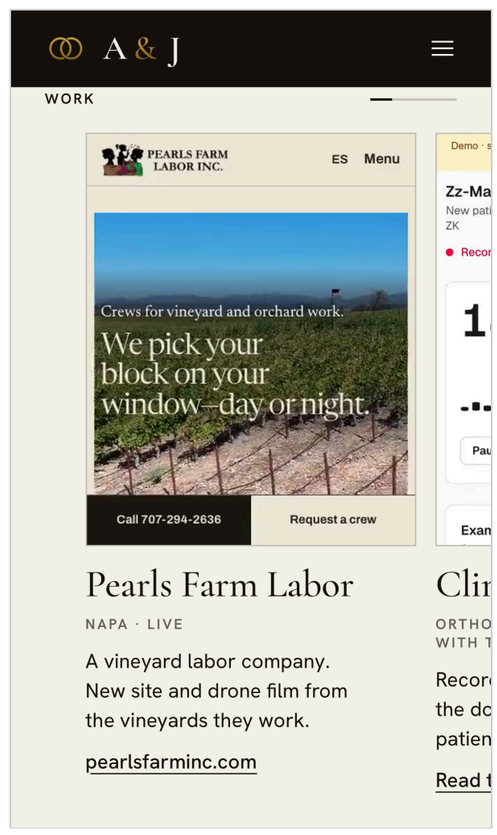

Landed: 3 cards, card 4 centred, held by overflow; the row's place stayed 3–3

WebKit (iPhone 13) · from 3 screens above, momentum with a 2,400 px frame

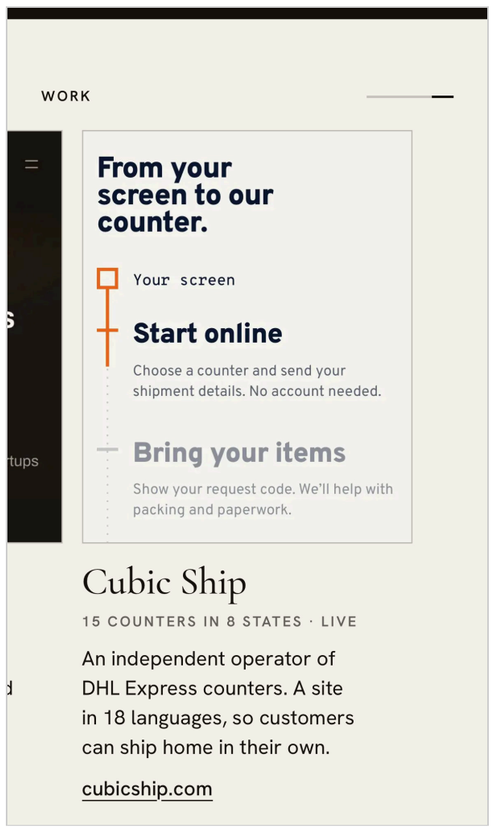

Shortly after the swipe (already held, where the momentum was quick)

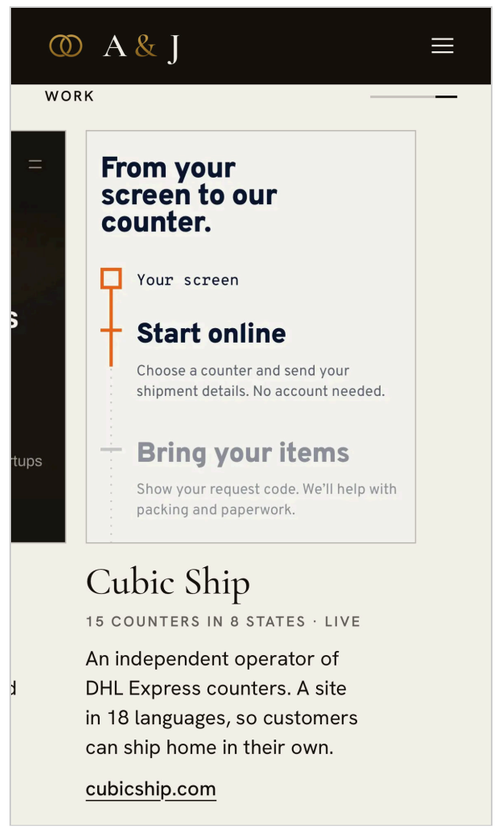

Landed: 0 cards, card 1 centred, held by overflow+fixed; the row's place stayed 0–0

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

BOOK A CALL, LET'S TALK

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

You own the site, the domain and the data from day one.

A

ASHAN

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

J

JORDAN

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

WHAT WE DO

Websites & getting found.

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

Phones, booking & follow-up.

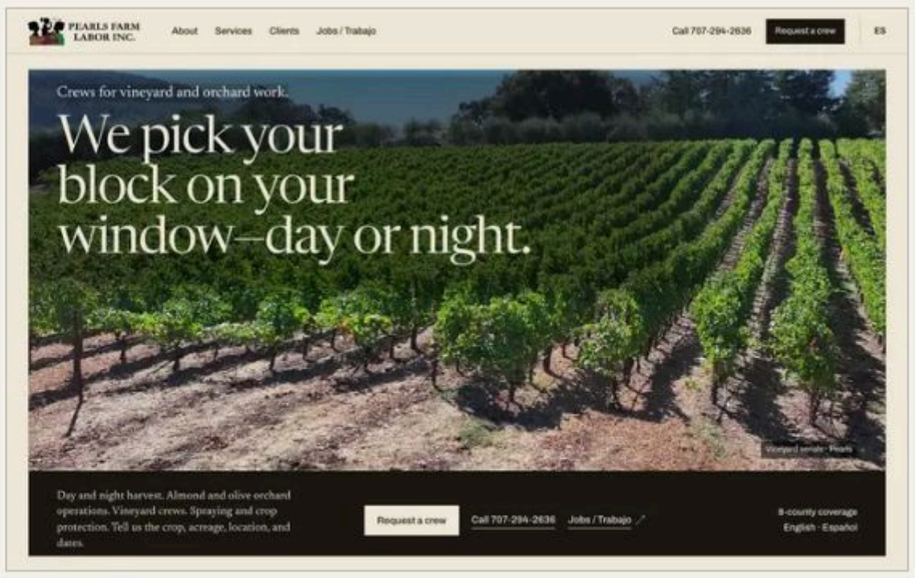

A line that answers when you can’t, booking that fills the calendar, and follow-up that goes out on its own.

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

WHAT WE DO

Websites & getting found.

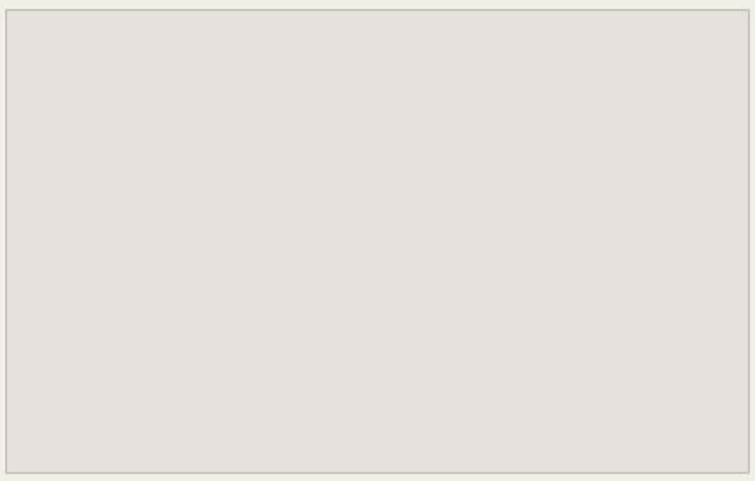

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

- Designed around how your customers call, book or buy, on your own domain
- Search done properly: your Google listing, local SEO and the pages behind them
- Set up to show up in AI search, when people ask ChatGPT who to call
- Kept up every month, with what it brings in tracked

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

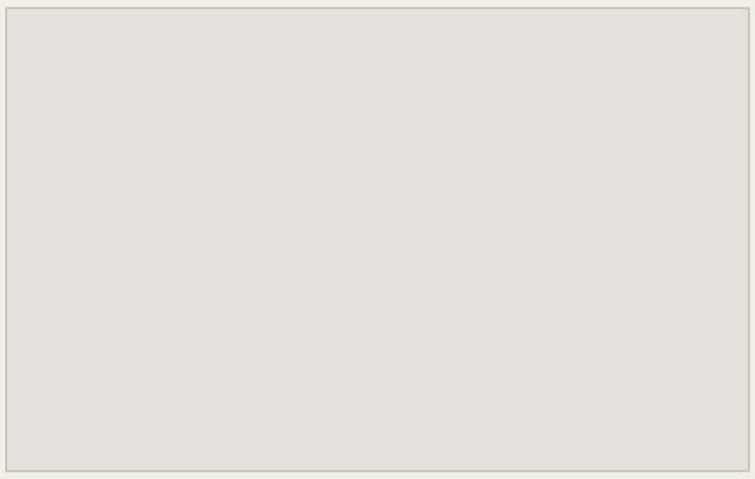

- We come to you for the shoot
- Photos and short video cut for your site, Google and Instagram
- New content every month, so your pages don't go stale

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the

- A line that answers when you can't and books the appointment
- Booking tied into how you already schedule
- Reminders and follow-up texts that go out without anyone

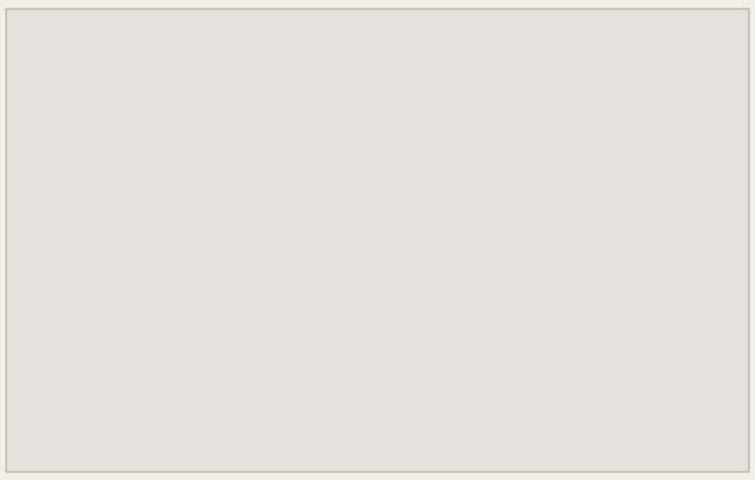

calendar, and follow-up that goes out on its own.

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- Built for one problem in your business, not a generic app
- Fits the tools and records you already use
- Tested with your team before anyone relies on it
- Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

BOOK A CALL, LET'S TALK

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain	Search done properly: your Google listing, local SEO and the pages behind them	Set up to show up in AI search, when people ask ChatGPT who to call	Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says plainly what you do, where and for whom, and that

your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

WHAT WE DO

Websites & getting found.

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

- Designed around how your customers call, book or buy, on your own domain
- Search done properly: your Google listing, local SEO and the pages behind them
- Set up to show up in AI search, when people ask ChatGPT who to call
- Kept up every month, with what it brings in tracked

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

- We come to you for the shoot
- Photos and short video cut for your site, Google and Instagram
- New content every month, so your pages don't go stale

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the calendar, and follow-up that goes out on its own.

- A line that answers when you can't and

books the appointment

Booking tied into how you already schedule

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

Built for one problem in your business, not a generic app

Fits the tools and records you already use

Tested with your team before anyone relies on it

Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after

the call.

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain

Search done properly: your Google listing, local SEO and the pages behind them

Set up to show up in AI search, when people ask ChatGPT who to call

Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says

about you, so we make sure your site says plainly what you do, where and for whom, and that your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.
