Site review — phone Work: a hard stop on the way in, from above and from below

2026-10-29 · branch kozmoz-v1 · dev server (localhost:3100), Playwright Chromium · desktop 1440×900 and phone 390×844 at 2× (header close-ups at 2× and 3×). Full pages: reduced motion, so everything is settled (the phone's Work is then the row to swipe; the pin has its own page). Intro and entrance frames: the page's clock slowed 12× and stopped for each capture, stamped in the page's own ms. Mouse frames, the pin and the hover close-up: real time.

This round · Phone Work: a hard stop on the way in

- However big or quick the scroll or fling, the moment the page reaches the section's start coming down (or has gone past it, within a frame), it's put exactly on Pearls Farm Labor; coming up, exactly on Cubic Ship. The page is frozen there (overflow hidden on the root; if the page slips all the same, as momentum that ignores that would, the body is pinned where it is) until the next touch, a new turn of the wheel, a key, or a resize, so whatever momentum is left dies. It's checked on every scroll event and every frame while the page moves near the section. Scrolls to a link (the hero's button, the menu) pass straight through. From there, each swipe moves one card, as before; past either end, the next swipe lets the page go with its own momentum.
- How it was checked, per browser: Chromium with its own touch pipeline (real flings: the browser's own momentum after the finger lifts, at 9,000–12,000 px/s), wheel streams, a swipe followed by iOS-style momentum (the page moving on by itself, frame by frame, no events), the same with one frame jumping 2,400 px, and the browser's own smooth scroll six screens on; WebKit 26 (Playwright) with the iPhone 13 profile, which can't drive native touch scrolling or a wheel, so the swipe's touch events go to the page and the momentum is the page moving on by itself, the jump and the smooth scroll as in Chromium. Each from well above or well below the section, the page's position measured after (in cards: 0 = Pearls, 3 = Cubic Ship), with the row's place sampled every frame:

Browser	Fling	Landed (cards)	Centred	Stage top	Held by	Row's place, every frame	
Chromium	from above: touch fling, 2 screens up, 9000px/s	0	card 1	0px	root	0–0	✓
Chromium	from above: touch fling, 5 screens up, 12000px/s	0	card 1	0px	root	0–0	✓
Chromium	from below: touch fling, 2 screens down, 9000px/s	3	card 4	0px	root	3–3	✓
Chromium	from below: touch fling, 1 screen down, 12000px/s	3	card 4	0px	root	3–3	✓
Chromium	from above: wheel fling (36 turns, no pause)	0	card 1	0px	root	0–0	✓
Chromium	from below: wheel fling (36 turns, no pause)	3	card 4	0px	root	3–3	✓
Chromium	from above: swipe + iOS-style momentum	0	card 1	0px	root + body pinned	0–0	✓
Chromium	from above: swipe + momentum, one 2400px frame	0	card 1	0px	root + body pinned	0–0	✓
Chromium	from above: swipe + smooth scroll 6 screens on	0	card 1	0px	root	0–0	✓
Chromium	from below: swipe + iOS-style momentum	3	card 4	0px	root + body pinned	3–3	✓
Chromium	from below: swipe + momentum, one 2400px frame	3	card 4	0px	root + body pinned	3–3	✓
Chromium	from below: swipe + smooth scroll 6 screens on	3	card 4	0px	root	3–3	✓
WebKit (iPhone 13)	from above: swipe + iOS-style momentum	0	card 1	0px	root + body pinned	0–0	✓
WebKit (iPhone 13)	from above: swipe + momentum, one 2400px frame	0	card 1	0px	root + body pinned	0–0	✓
WebKit (iPhone 13)	from above: swipe + smooth scroll 6 screens on	0	card 1	0px	root	0–0	✓
WebKit (iPhone 13)	from below: swipe + iOS-style momentum	3	card 4	0px	root + body pinned	3–3	✓
WebKit (iPhone 13)	from below: swipe + momentum, one 2400px frame	3	card 4	0px	root + body pinned	3–3	✓
WebKit (iPhone 13)	from below: swipe + smooth scroll 6 screens on	3	card 4	0px	root	3–3	✓
WebKit (iPhone 13)	from above: swipe + iOS-style momentum (again)	0	card 1	0px	root + body pinned	0–0	✓

- After landing (Chromium): a swipe up → card 2, a swipe down → card 1, another swipe down → the page let go (-0.256 cards, scrolling up with its own momentum); the hero's button still goes straight to Contact (its top at 78px, nothing frozen); a resize while frozen lets go cleanly (root overflow “”, body static). WebKit: a swipe up → card 2, down → card 1.
- Console errors in both: none. Not tested: Safari on an iPhone itself (WebKit here runs on the Mac and can't reproduce iOS's own momentum).

Last round (74bcd5e)

- One swipe, one card through Work on phones; the contact section reads “Book a call, let’s talk.” / “One of us writes back to set up a 30-minute call. Just us two and you.”; the rise starts as the “&” lands (704 ms).

The whole timeline, from the first paint

Desktop 1440	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 425 ms: logo 0.85)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 66.6364% at 1402 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4768 ms, two-thirds at 4941 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.25 s–7.05 s: finished
The “&” drops in, once both first names have their second letter	5.51 s–5.96 s
The hint, the lede and the button rise in together, as the “&” lands	**5.96 s–6.96 s**, the names still writing

Phone 390	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 423 ms: logo 0.85)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 66.1752% at 1400 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4768 ms, two-thirds at 4940 ms); gone at 5.25 s
Both names write themselves in, together, from the black clearing	5.25 s–7.05 s: finished
The “&” drops in, once both first names have their second letter	5.51 s–5.96 s
The hint, the lede and the button rise in together, as the “&” lands	**5.96 s–6.96 s**, the names still writing

As before, re-captured

Last round (84bac83)

- The two rings over the intro's black; the trail laid on as it is over the header's black bar; the gold buttons lighter at the top (#BE9645), 4.7:1 or more behind the capitals; keyboard focus a thin ink ring.

The gold cursor trail (c5f0283)

- A fine gold thread behind the rings while the mouse moves: the pointer's last 12 positions at most, none older than 260 ms, never longer than 140 px; 2.6 px wide behind the rings, tapering to nothing; the gold type's golds, at most 55% opaque; gone within 260 ms of stopping. Mouse or trackpad only.

The longer hold

- Desktop 1440: the line settled (120%) at 2002 ms and still there, untouched, at 4157 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.28 s.
- Phone 390: the line settled (120%) at 2001 ms and still there, untouched, at 4157 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.28 s.

The mouse bend

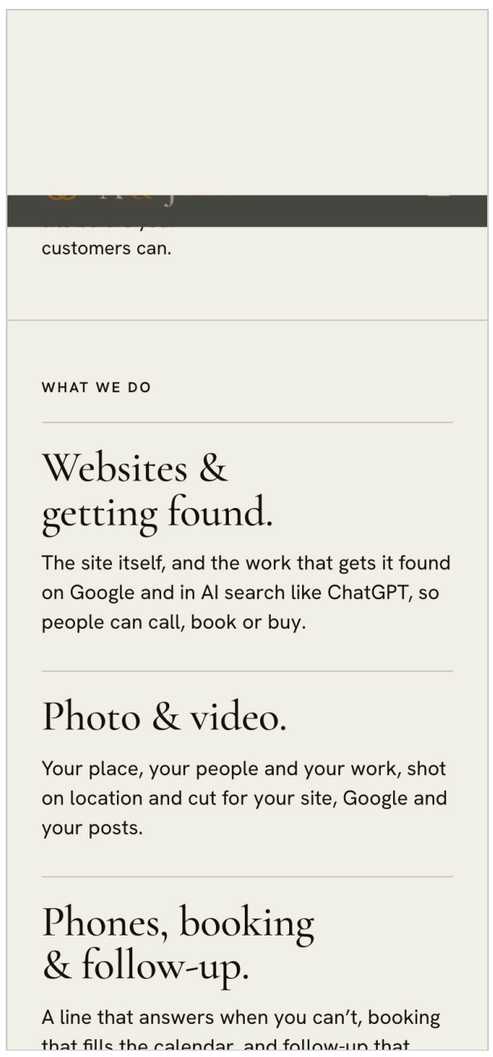

- Rebuilt: the logo is redrawn one screen pixel column at a time (2× here, so 2 columns to a CSS px), each column taking its slice of the logo from where a smooth bend says it came from, moved up or down and stretched a touch. The bend: a slow ripple of up to 4 px and a swell of up to 2.5 px around the pointer, with a drag of up to 2.5 px along its motion, falling off smoothly to nothing 144 px from it (at 1440 wide); it glides after the pointer, comes in over 0.35 s and dies away over 0.5 s where it was when the pointer leaves the logo. No strips, so no seams; nothing moves more than a few pixels, so no letter or runner comes apart.
- entering, onto the E (2747 ms, pointer at 451, 370): 4902 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- mid-bend, over the O and the R (3780 ms, pointer at 701, 370): 8696 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- settling, the pointer gone down onto the black (4169 ms, pointer at 701, 733): 4636 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- Only with a mouse (hover and a fine pointer) and without reduced motion; never on touch.

Page heights (c5f0283 → now)

	Desktop 1440	Phone 390

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

BOOK A CALL, LET'S TALK

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

You own the site, the domain and the data from day one.

A

ASHAN

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

J

JORDAN

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

WHAT WE DO

Websites & getting found.

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

Phones, booking & follow-up.

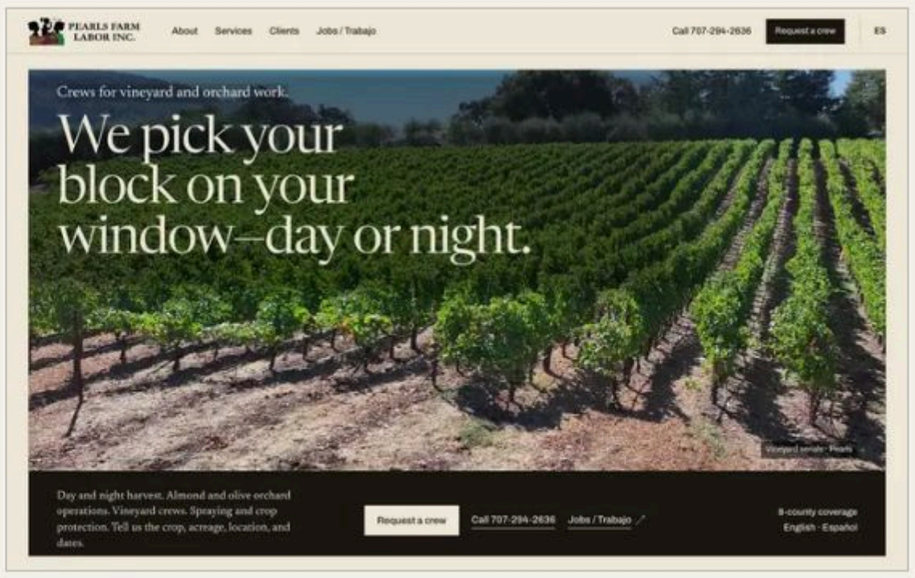

A line that answers when you can’t, booking that fills the calendar, and follow-up that goes out on its own.

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

WHAT WE DO

Websites & getting found.

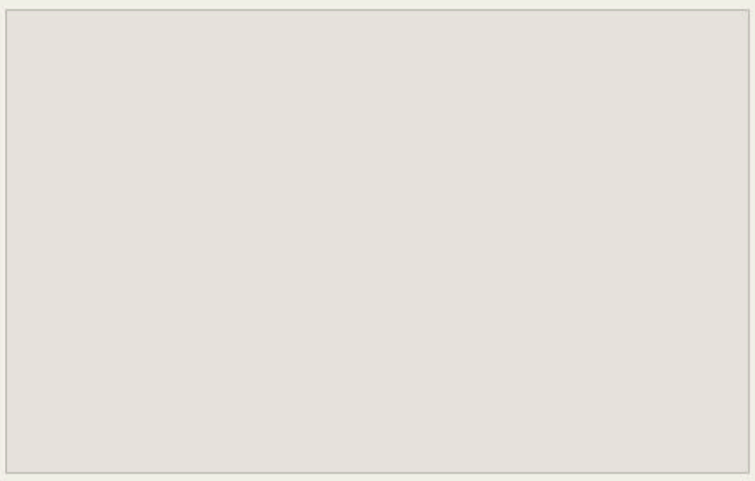

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

- Designed around how your customers call, book or buy, on your own domain
- Search done properly: your Google listing, local SEO and the pages behind them
- Set up to show up in AI search, when people ask ChatGPT who to call
- Kept up every month, with what it brings in tracked

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

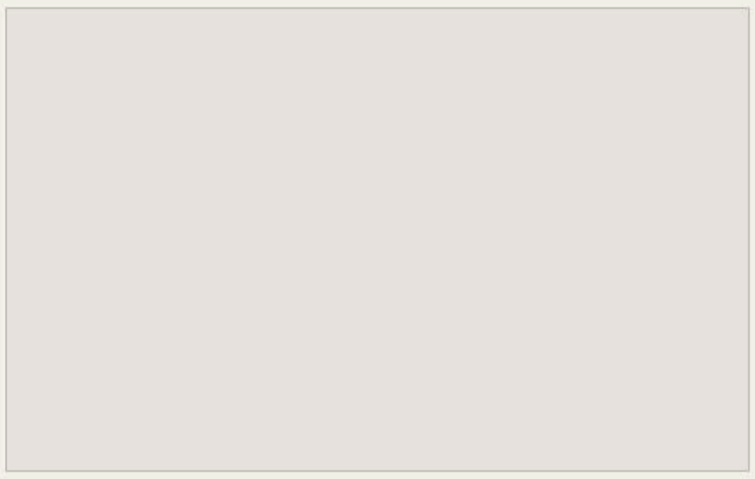

- We come to you for the shoot
- Photos and short video cut for your site, Google and Instagram
- New content every month, so your pages don't go stale

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the

- A line that answers when you can't and books the appointment
- Booking tied into how you already schedule
- Reminders and follow-up texts that go out without anyone

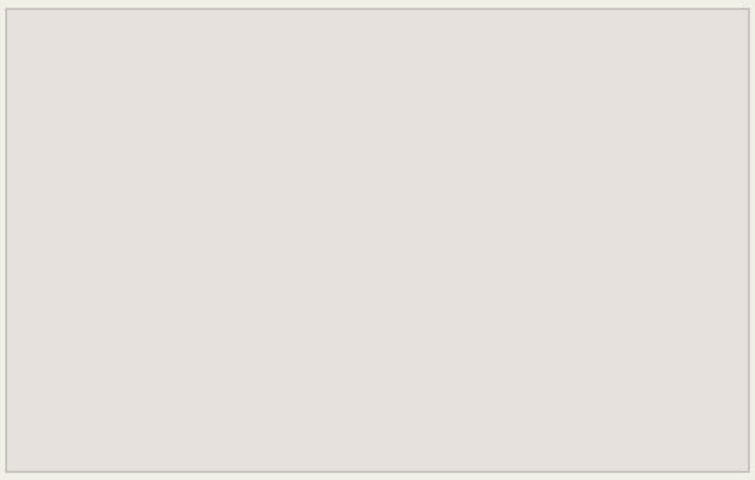

calendar, and follow-up that goes out on its own.

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- Built for one problem in your business, not a generic app
- Fits the tools and records you already use
- Tested with your team before anyone relies on it
- Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

BOOK A CALL, LET'S TALK

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain	Search done properly: your Google listing, local SEO and the pages behind them	Set up to show up in AI search, when people ask ChatGPT who to call	Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says plainly what you do, where and for whom, and that

your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

- We come to you for the shoot
- Photos and short video cut for your site, Google and Instagram
- New content every month, so your pages don't go stale

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the calendar, and follow-up that goes out on its own.

- A line that answers when you can't and

books the appointment

Booking tied into how you already schedule

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

Built for one problem in your business, not a generic app

Fits the tools and records you already use

Tested with your team before anyone relies on it

Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after

the call.

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain

Search done properly: your Google listing, local SEO and the pages behind them

Set up to show up in AI search, when people ask ChatGPT who to call

Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says

about you, so we make sure your site says plainly what you do, where and for whom, and that your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.
