Ashan & Jordan

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

TELL US WHAT'S GOING ON

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

A

ASHAN

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

J

JORDAN

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

You own the site, the domain and the data from day one.

WHAT WE DO

Websites.

The site itself, made so the people who find you can call, book or buy. You own it.

ASHAN DESIGNS, JORDAN BUILDS

Photo & video.

Your place, your people and your product, shot on location and cut for your site and your posts.

ASHAN PLANS, JORDAN SHOOTS

Getting found.

Google, local search and ads, set up and tracked so you can see what each one brings in.

ASHAN WRITES, JORDAN SETS UP

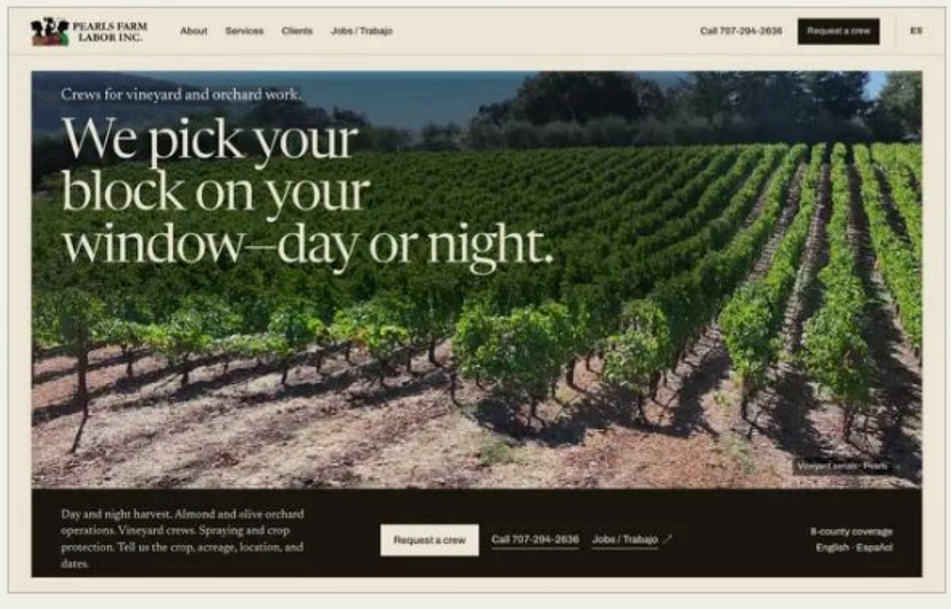

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the calendar, and follow-up that goes out without anyone having to remember.

WHAT WE DO

Websites.

The site itself, made so the people who find you can call, book or buy. You own it.

ASHAN DESIGNS, JORDAN BUILDS

- Designed around how your customers call, book or buy
- Fast on phones, on your own domain
- Kept up every month, not handed off and forgotten

Photo & video.

Your place, your people and your product, shot on location and cut for your site and your posts.

ASHAN PLANS, JORDAN SHOOTS

- We come to you for the shoot
- Photos and short video cut for your site, Google and Instagram
- New content every month, so your pages don’t go stale

Getting found.

Google, local search and ads, set up and tracked so you can see what each one brings in.

ASHAN WRITES, JORDAN SETS UP

- Your Google listing set up and kept current: hours, photos, review replies
- Local search done properly on the site itself
- Ads when they make sense, with what each one brings in tracked

Phones, booking & follow-up.

A line that answers when you can’t, booking that fills the calendar, and follow-up that goes out without anyone having to remember.

ASHAN TESTS, JORDAN BUILDS

- A line that answers when you can’t and books the appointment
- Booking tied into how you already schedule
- Follow-up texts that go out on their own, plus custom tools for how you work

How it starts

1

A 30-minute call.

You tell us where it’s going wrong, in your words.

2

A one-page plan.

What we’d fix first and what it costs, sent by the day we say.

3

The shoot and the build.

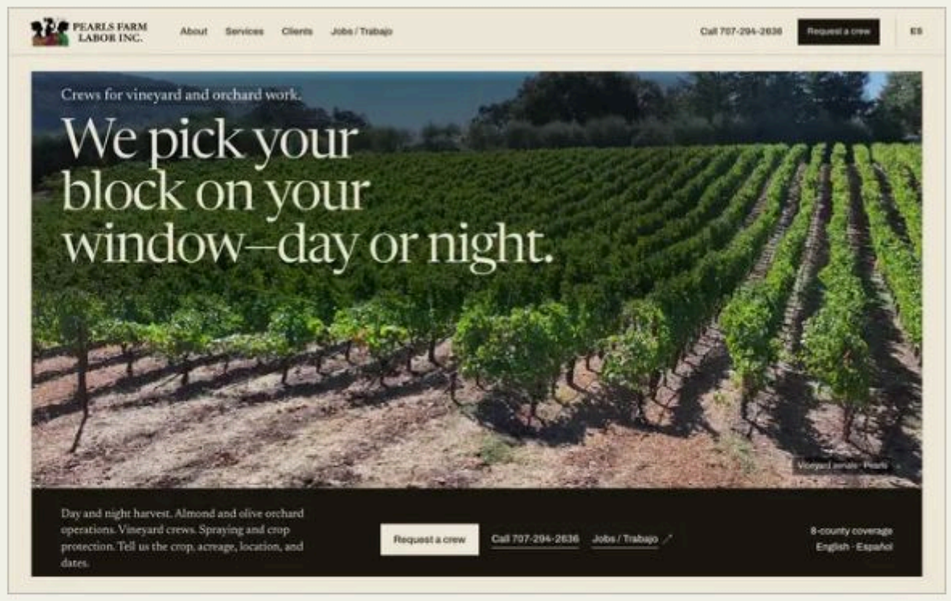

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

CLINICAL SCRIBE · CONSULT CAPTURE AND FOLLOW-UP

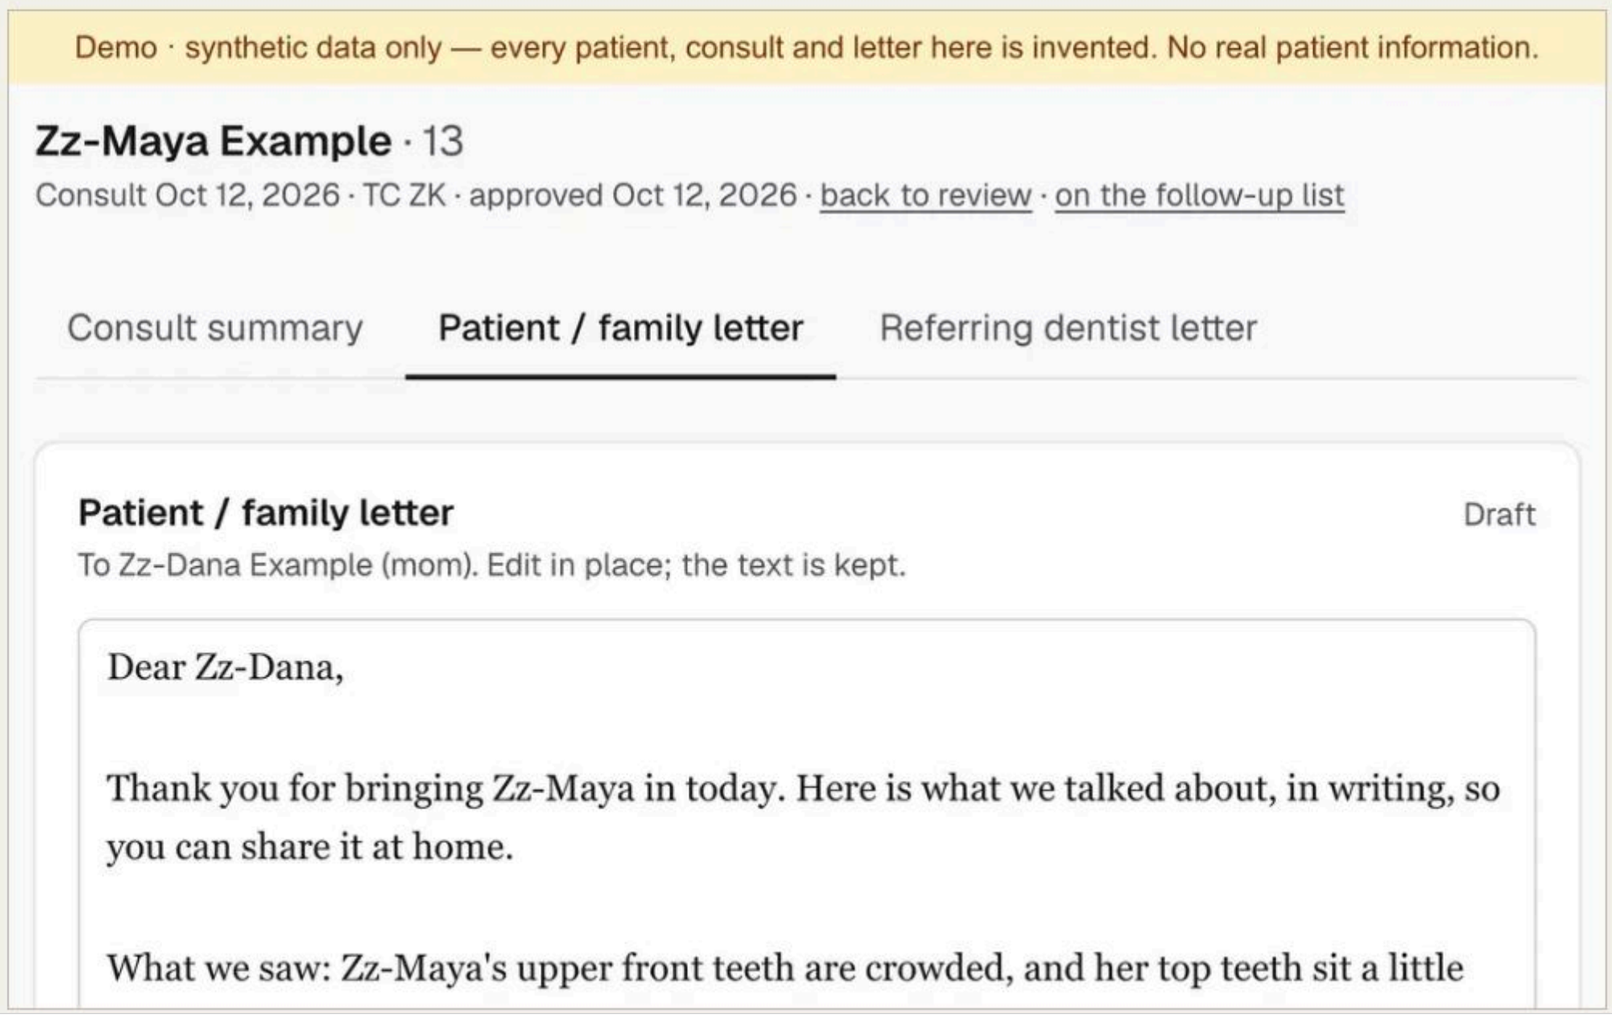

The consult decides the case, and nothing said in it survives the room.

Clinical Scribe is built to record the consultation, draft the letters that come out of it, and keep what was said somewhere the practice can look at it.

CLIENT
Orthodontic practice

STATUS
Built, entering pilot testing

Records the consultation.	Drafts the doctor letter and the patient take-home letter from it.	Surfaces the patterns across consults.

DEMO DATA One made-up consult from start to finish: recorded, summarized, both letters drafted, then the follow-up messages. The app's own screens, rebuilt with invented patients.

01 THE PROBLEM

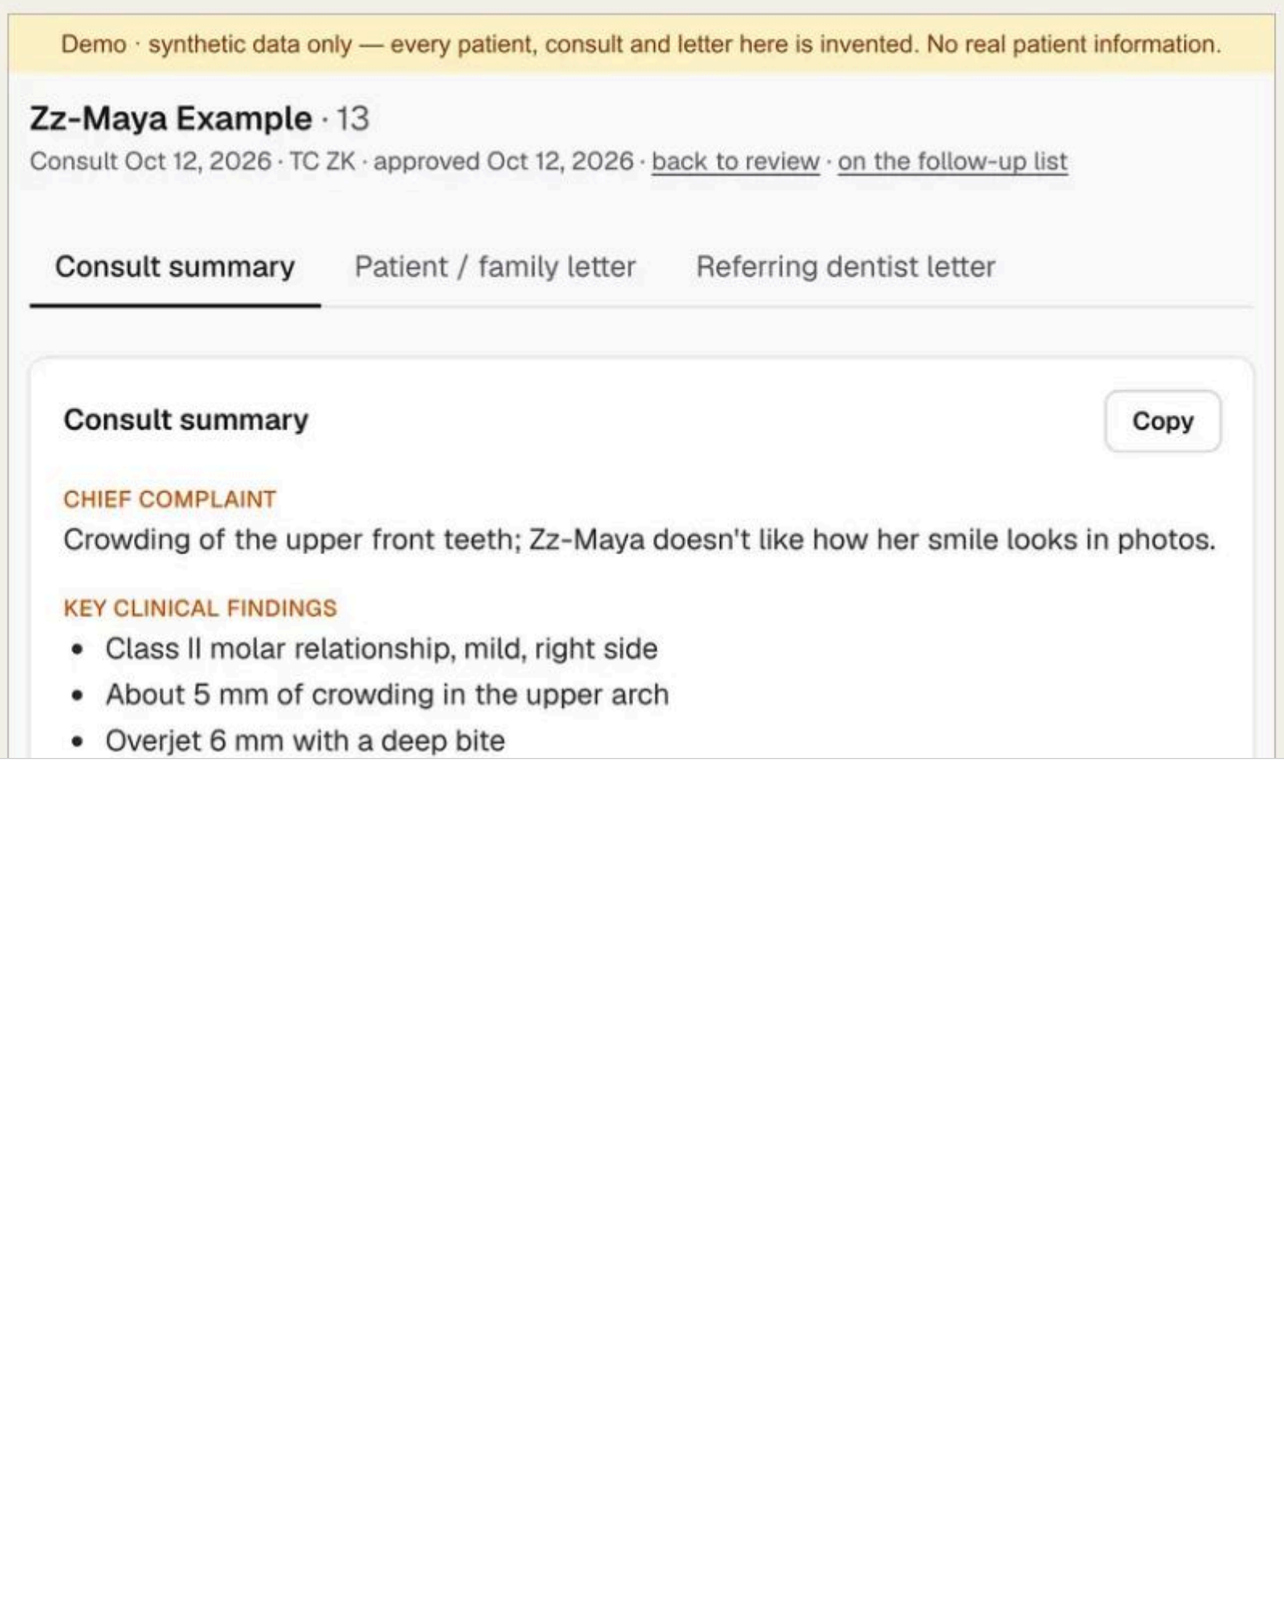

The patient says they'll think about it, and the practice never hears what about.

Which objection came up, what got explained, where the hesitation actually started: by the time anyone needs to know, it's down to memory. Follow-up is whatever the coordinator remembers days later, written from a blank text box.

02 THE BUILD

One recording, a summary, and the letters that follow from it.

The system records the consultation and produces a summary of it. From that summary and the exam findings it drafts both letters — the doctor letter and the patient take-home letter — each in its own register. When a patient does not sign that day, it gives the coordinator a few follow-up messages she can read, pick, edit and send, written from what was actually said in the consult rather than from a blank box.

- Lower midline 2 mm to the left

DEMO DATA The summary of the consult, drafted from the recording.

Demo · synthetic data only — every patient, consult and letter here is invented. No real patient information.

Zz-Maya Example · 13

Consult Oct 12, 2026 · TC ZK · approved Oct 12, 2026 · back to review · on the follow-up list

Referring dentist letter Draft

To Dr. Zz-Lee Sample. Edit in place; the text is kept.

Dear Dr. Zz-Sample,

Thank you for referring Zz-Maya Example, whom we saw today for an orthodontic consultation.

Findings: a mild Class II molar relationship on the right, about 5 mm of upper

DEMO DATA The doctor letter, drafted from the summary and the exam findings.

Demo · synthetic data only — every patient, consult and letter here is invented. No real patient information.

UPCOMING · 1

Draft message close

```
Hi Zz-Dana, it's Zz-Kim at Demo Orthodontics. As promised, here's Zz-
Maya's plan in writing: clear aligners for about 18 months, $500 to
start, then $225 a month. We're confirming your insurance now. Would
Thursday after 4 work for a quick call with you both?
```

Copy | Close | Sending is not part of this prototype — copy it into your email.

DEMO DATA Follow-up messages to pick, edit and send when a patient doesn't sign that day.

---

03 THE RESULT SO FAR

Built, and about to be

Built, and about to be tested on real consults.

Clinical Scribe is built and is being prepared for a pilot on a few real consults. There are no outcomes to report yet: how accurate the summaries are, how much the letters need editing, and whether the same hesitations really do show up across consults are what the pilot is for.

HOW WE APPROACHED IT

The point was never note-taking. Notes are a by-product. The point is that a practice can tell you its close rate to a decimal place and cannot tell you why the people who said no actually said no. So we started from the conversation itself: capture what was said, and let the letters and the follow-up come from that instead of from someone's memory of it.

HANDLING PATIENT DATA

Designed from the start for HIPAA-conscious handling of protected health information.

The clinical system runs on dedicated HIPAA-eligible infrastructure, not general consumer services.

Patient data never passes through consumer AI tools.

CONTACT

Could you say why your last ten no's said no?

If the answer is in what gets said during the consult, that's the problem this was built for. Tell us how yours run and we'll tell you whether it's the same shape.
