Site review — a gold trail behind the cursor

2026-10-29 · branch kozmoz-v1 · dev server (localhost:3100), Playwright Chromium · desktop 1440×900 and phone 390×844 at 2× (header close-ups at 2× and 3×). Full pages: reduced motion, so everything is settled (the phone's Work is then the row to swipe; the pin has its own page). Intro and entrance frames: the page's clock slowed 12× and stopped for each capture, stamped in the page's own ms. Mouse frames, the pin and the hover close-up: real time.

This round · the gold cursor trail

- A fine gold thread behind the two rings while the mouse moves (components/kozmoz/trail.tsx): back through the pointer's last 12 positions at most, none older than 260 ms and never longer than 140 px; 2.6 px wide just behind the rings, tapering to nothing; the gold type's golds (light #BE9645 near the rings, mid #A8802F, deep #876122 at the tail), at most 55% opaque near the head and fading to nothing at the tail. It starts 7 px back from the pointer, so it comes out from behind the rings. Once the mouse stops it fades as a whole and is gone within 260 ms. No sparkles, particles or glow.
- Never over the words: on the paper the canvas multiplies, so the thread tints the paper and the ink stays as it is (where it crosses letters it passes behind them); over the intro's black it's laid on as it is, where it reads as a quiet gold line.
- One fixed canvas over the page (z 1001, pointer-events none), sized to the screen at its pixel density, up to 2× (2880×1800 at 1440×900; the 3× close-ups below are of that), drawn by requestAnimationFrame only while there's a thread: frames drawn in a second of the mouse at rest: 0.
- Checked in real time: while moving, drawn (50 sampled pixels); 400 ms after stopping, 0; with the menu open, 0; over the contact form's text box, 0; back on the paper, 60; on /services too (67); reduced motion: hidden, 0; on a phone (touch, no fine pointer): hidden, 0.
- Over the intro the pointer is the system arrow, as before (the intro sets its own cursor); the thread runs behind it the same way.

Last round (6a3897f) · 1 · The rise, ms from the black clearing

Step	ms
The “&” comes up softly	0–400
Ashan and Jordan start writing, together	400
Ashan ends; the F of Fernando starts; **the hint, the lede and the button start to rise**	1048
Jordan ends; the L of Lopez starts	1400
The rise ends	**2048** (was 1648)
Fernando and Lopez end together: finished	2200 / 2200

- The rise takes 1000 ms (was 600), on a softer ease-out, cubic-bezier(0.3, 0.55, 0.25, 1) (was cubic-bezier(0.2, 0.7, 0.3, 1)): it moves off gently and settles over a long, soft tail. It still starts at the F; the hint, the lede and the button still rise together (hint at 1048, button at 1048); nothing else in the entrance changed. It ends before the names do, so the hero is finished at 2200 ms as before.
- Desktop 1440: the rise starting (1112 ms in): lede 11.3px down, button 0.13; mid-rise (1379 ms in): 3.8px, button 0.71; finished: 0px, button 1.
- Phone 390: the rise starting (1109 ms in): lede 12.3px down, button 0.12; mid-rise (1382 ms in): 4.1px, button 0.71; finished: 0px, button 1.
- Real time: a wheel or a click during the entrance still finishes it at once (1 / 1); repeat visits use the same timing from load; reduced motion shows everything at once (1).

Last round (6a3897f) · 2 · The main button

- The label, everywhere it was “Tell us what’s going on”: the hero (“Book a call, let’s talk”, to #contact), the end of /services (“Book a call, let’s talk”, to /#contact) and the end of /work (“Book a call, let’s talk”, to /#contact). It shows as “BOOK A CALL, LET’S TALK”, in the same capitals and spacing (1.74922px at 1440). The two labels live in lib/kozmoz.ts (hero.cta and servicesPage.start.cta; /work uses the hero's). The service pages and the case study end in the contact form, whose button stays “Send it”. The contact section's title is unchanged: “Tell us what’s going on.”.
- The gold: every main button is now gold, the “Send it” button the same rule, so they're one button style. It's the gold type's three golds (the “&”, the wordmark), each 19% deeper, falling from the top edge to the bottom (linear-gradient(rgb(154, 122, 56), rgb(136, 104, 38) 38%, rgb(109, 79, 28))…), over the solid #A8802F where a gradient can't be drawn; the capitals in the paper (rgb(244, 241, 234)). Why deeper: on the “&”'s own golds the paper capitals would be about 3.2:1, under the 4.5:1 small text needs; behind the capitals now, measured from the pixels: 4.68–5.25:1 (#866725 → #7E5F22); “Send it” 4.66–5.15:1.
- Hovered and focused: a slightly deeper gold (an inset shade over the gradient, 0.25 s), 5.81–6.45:1 behind the capitals; on a mouse the spacing still opens (2.74878px). The focus ring rule is unchanged (1px currentColor outline, .25rem off).
- Phones: “BOOK A CALL, LET’S TALK” on one line — at 360 wide 1 line, 231px in a 307px column; at 320, 1 line, 225px in 271px; at 390, 246px. It fits at the full spacing (1.68px), so the spacing wasn't reduced; the label is also kept from ever wrapping.
- design/review/cc-report.md and design/review/next-prompt.md are now in .gitignore (with the .env* line kept), committed separately.

The whole timeline, from the first paint

Desktop 1440	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 425 ms: logo 0.85)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 66.6362% at 1403 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4769 ms, two-thirds at 4941 ms); gone at 5.25 s
The “&” comes up softly	5.25 s–5.65 s
Both names write themselves in, together	5.65 s–7.45 s: finished
The hint, the lede and the button rise in together, as the F of Fernando starts	**6.30 s–7.30 s**, the names still writing

Phone 390	from the first paint
Black, then the logo fades in	0.15–0.75 s (frame at 424 ms: logo 0.85)
The gold rule draws	0.55–1.05 s
The line burns in	0.75–1.95 s (front at 66.6362% at 1401 ms)
The hold: logo and line, settled	**1.95–4.2 s, 2.25 s** (was 1.95–3.2 s); the mouse may bend the logo
The line and rule dim out	4.2–4.45 s
The black slides off to the left; the logo flies to the header and lands	4.45–5.25 s (a third across at 4768 ms, two-thirds at 4941 ms); gone at 5.25 s
The “&” comes up softly	5.25 s–5.65 s
Both names write themselves in, together	5.65 s–7.45 s: finished
The hint, the lede and the button rise in together, as the F of Fernando starts	**6.30 s–7.30 s**, the names still writing

As before, re-captured

The longer hold

- Desktop 1440: the line settled (120%) at 2002 ms and still there, untouched, at 4158 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.26 s.
- Phone 390: the line settled (120%) at 2001 ms and still there, untouched, at 4157 ms (line 1, black 0% across). Real time: at 4.1 s the line is still at 1, the black unmoved (none); the black gone at 5.26 s.

The mouse bend

- Rebuilt: the logo is redrawn one screen pixel column at a time (2× here, so 2 columns to a CSS px), each column taking its slice of the logo from where a smooth bend says it came from, moved up or down and stretched a touch. The bend: a slow ripple of up to 4 px and a swell of up to 2.5 px around the pointer, with a drag of up to 2.5 px along its motion, falling off smoothly to nothing 144 px from it (at 1440 wide); it glides after the pointer, comes in over 0.35 s and dies away over 0.5 s where it was when the pointer leaves the logo. No strips, so no seams; nothing moves more than a few pixels, so no letter or runner comes apart.
- entering, onto the E (2705 ms, pointer at 451, 370): 4838 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- mid-bend, over the O and the R (3737 ms, pointer at 701, 370): 8618 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- settling, the pointer gone down onto the black (4109 ms, pointer at 701, 733): 4875 pixels changed from the still logo (as the canvas draws it) within 200 px of the pointer, 0 further away; canvas pixels drawn off the logo: 0.
- Only with a mouse (hover and a fine pointer) and without reduced motion; never on touch.

Page heights (6a3897f → now)

	Desktop 1440	Phone 390
/	4214 → 4214	4525 → 4525 (with the pin: 6675)
/services	3459 → 3459	4354 → 4354
/services/websites-and-getting-found	3603 → 3603	4852 → 4852
/work	2119 → 2119	4207 → 4207

1 · No panel

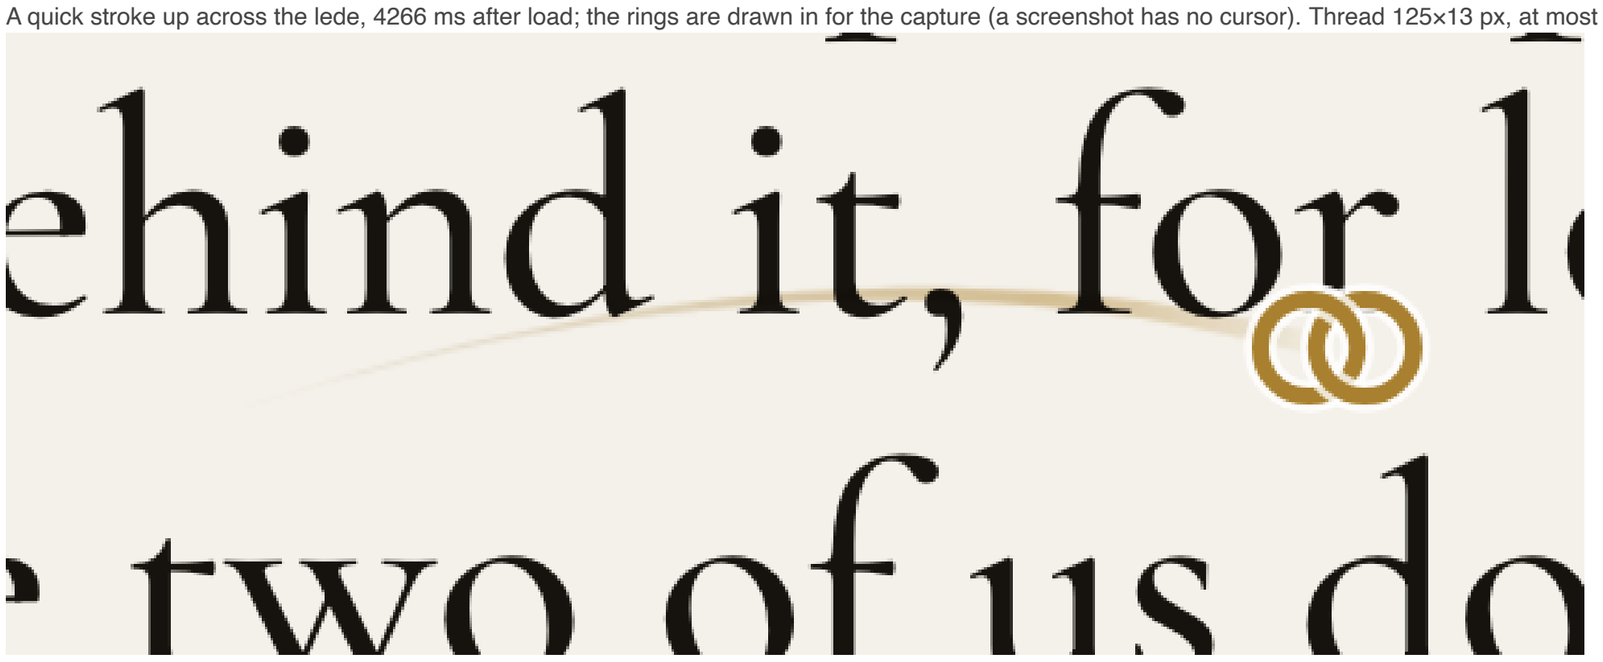

- Panel, frosted white and their canvas on 8 page captures: 0 elements (panel.tsx and art.tsx deleted, their CSS gone). Page root padding: 0px. html rgb(244, 241, 234), body rgb(244, 241, 234). Theme colour #F4F1EA.
- Screen edges, scrolled into /services/websites-and-getting-found: desktop 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234; phone 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234 (the paper is 244,241,234).
- Layout and widths kept: the root size is still worked out from the screen less the old margin (15.378px at 1440, 15.616px at 390), and that margin is now part of every side margin, so the page's grid sits at x 143.3–1296.7 (desktop) and 27.6–362.4 (phone), the header's rings at x 58.8 / 27.6: where they were inside the panel. No horizontal scroll: none on any page.

The gold cursor trail (desktop 1440, mid-movement, the page's clock stopped for each capture)

On the paper

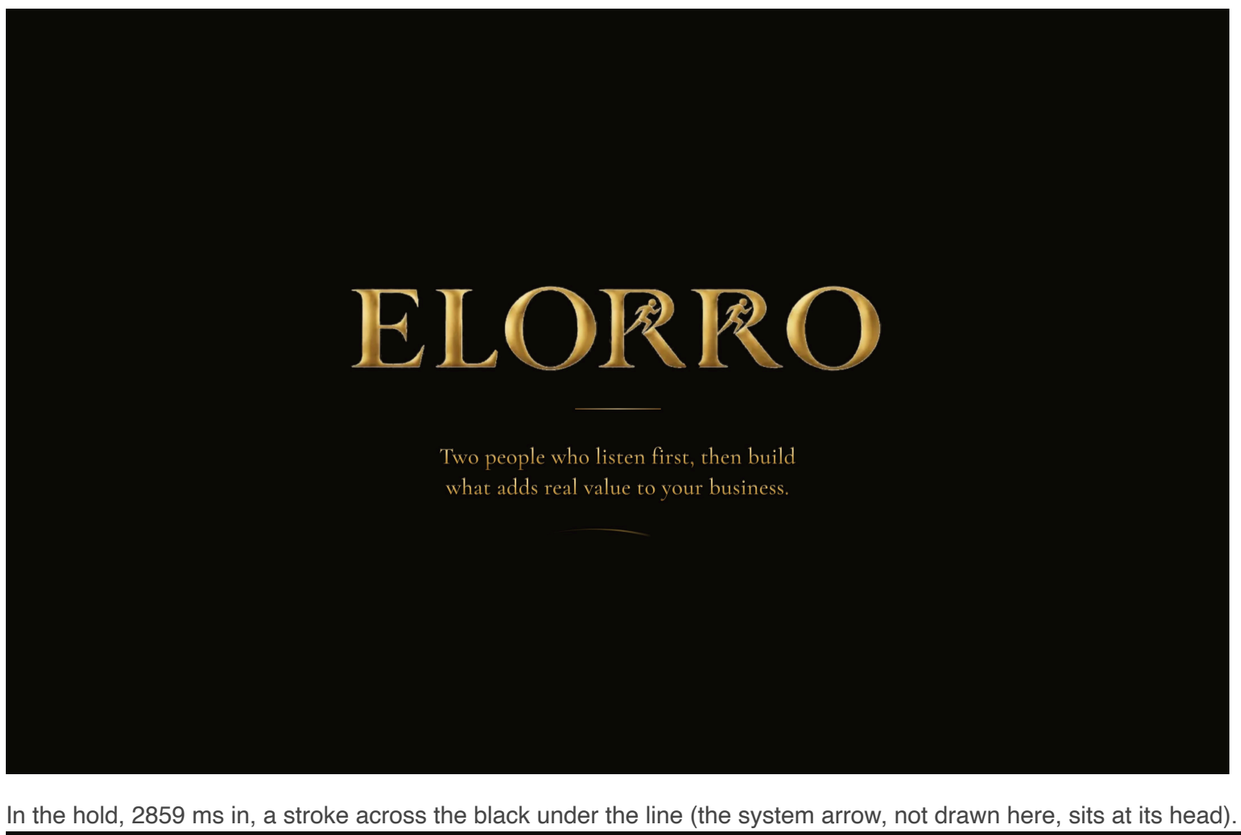

A quick stroke up across the lede, 4266 ms after load; the rings are drawn in for the capture (a screenshot has no cursor). Thread 125×13 px, at most 0.51 opaque.

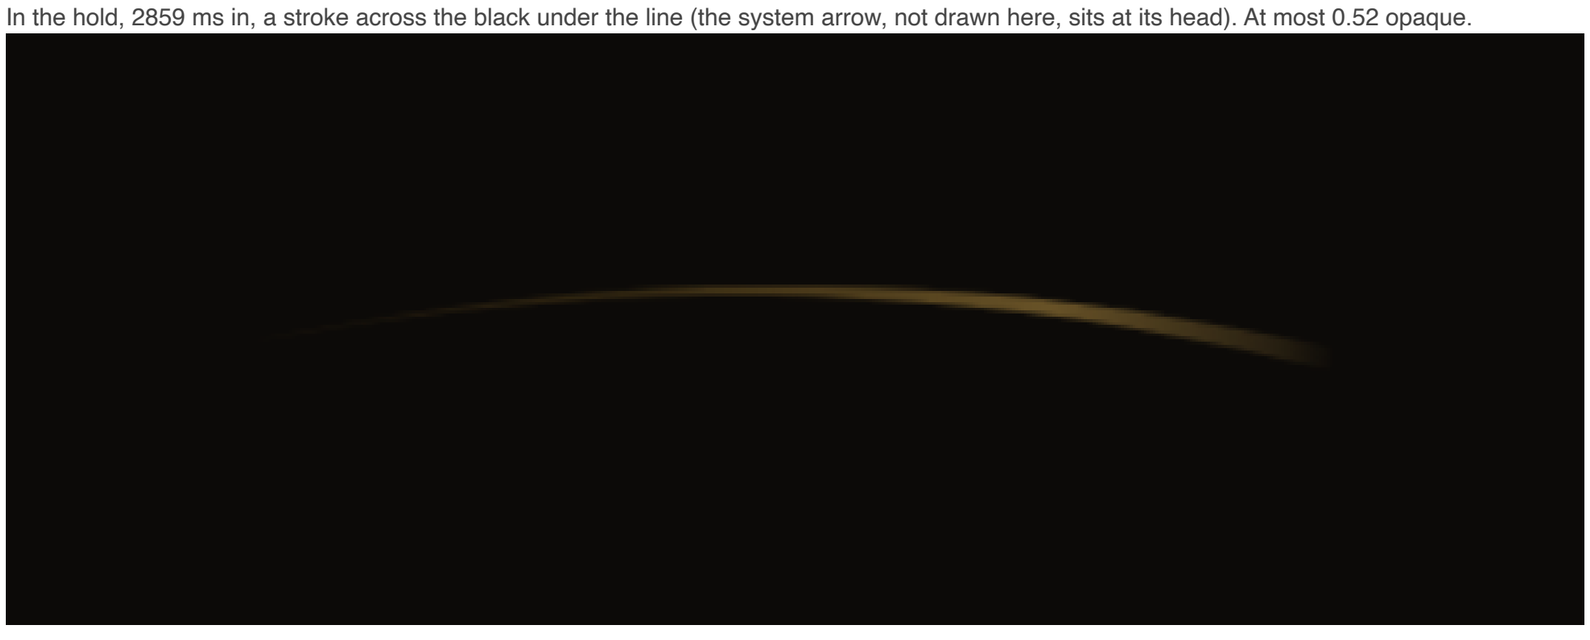

Close up, 3×: the thread comes out from behind the rings and passes behind the letters (the r of “for” stays whole).

On the intro's black

In the hold, 2859 ms in, a stroke across the black under the line (the system arrow, not drawn here, sits at its head). At most 0.52 opaque.

Close up, 3×.

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

BOOK A CALL, LET'S TALK

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

You own the site, the domain and the data from day one.

A

ASHAN

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

J

JORDAN

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

WHAT WE DO

Websites & getting found.

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

Phones, booking & follow-up.

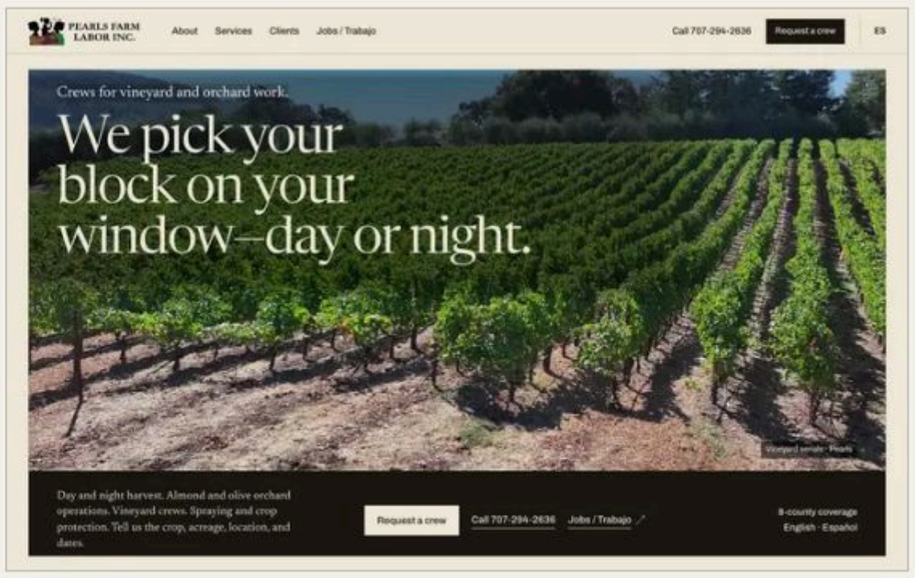

A line that answers when you can’t, booking that fills the calendar, and follow-up that goes out on its own.

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- A line that answers when you can't and books the appointment
- Booking tied into how you already schedule
- Reminders and follow-up texts that go out without anyone

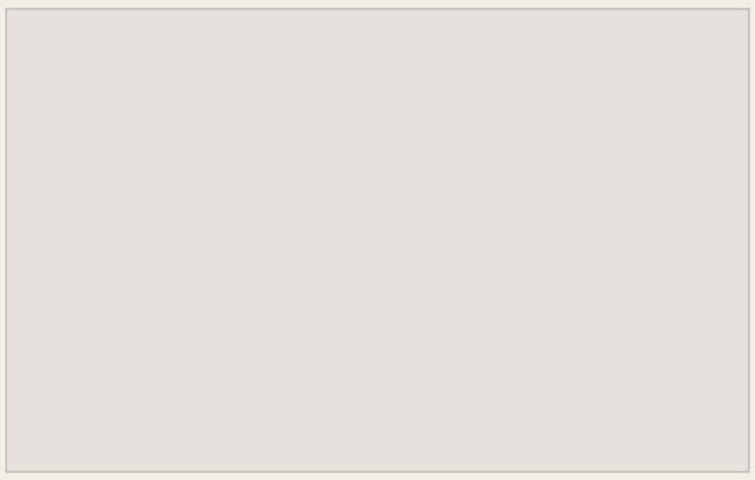

calendar, and follow-up that goes out on its own.

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- Built for one problem in your business, not a generic app
- Fits the tools and records you already use
- Tested with your team before anyone relies on it
- Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

BOOK A CALL, LET'S TALK

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain	Search done properly: your Google listing, local SEO and the pages behind them	Set up to show up in AI search, when people ask ChatGPT who to call	Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says plainly what you do, where and for whom, and that

your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

ELORRO

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain

Search done properly: your Google listing, local SEO and the pages behind them

Set up to show up in AI search, when people ask ChatGPT who to call

Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says

about you, so we make sure your site says plainly what you do, where and for whom, and that your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

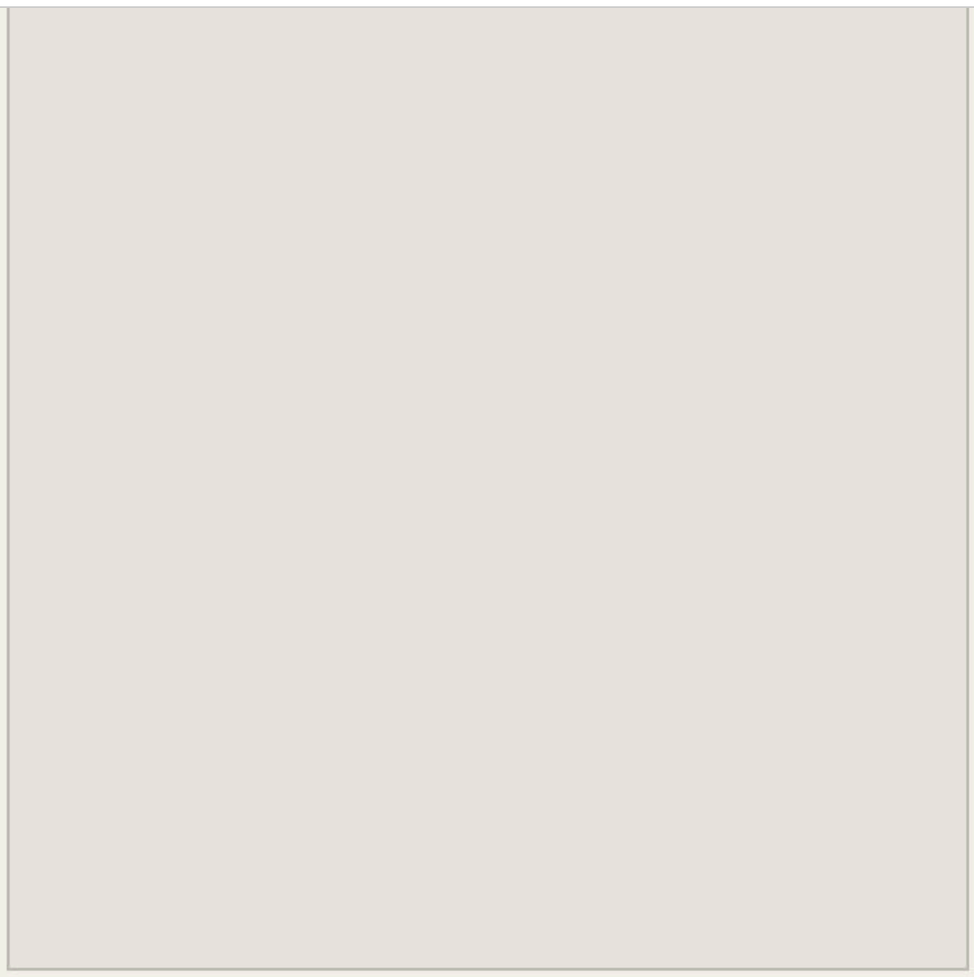

05 EVERY MONTH

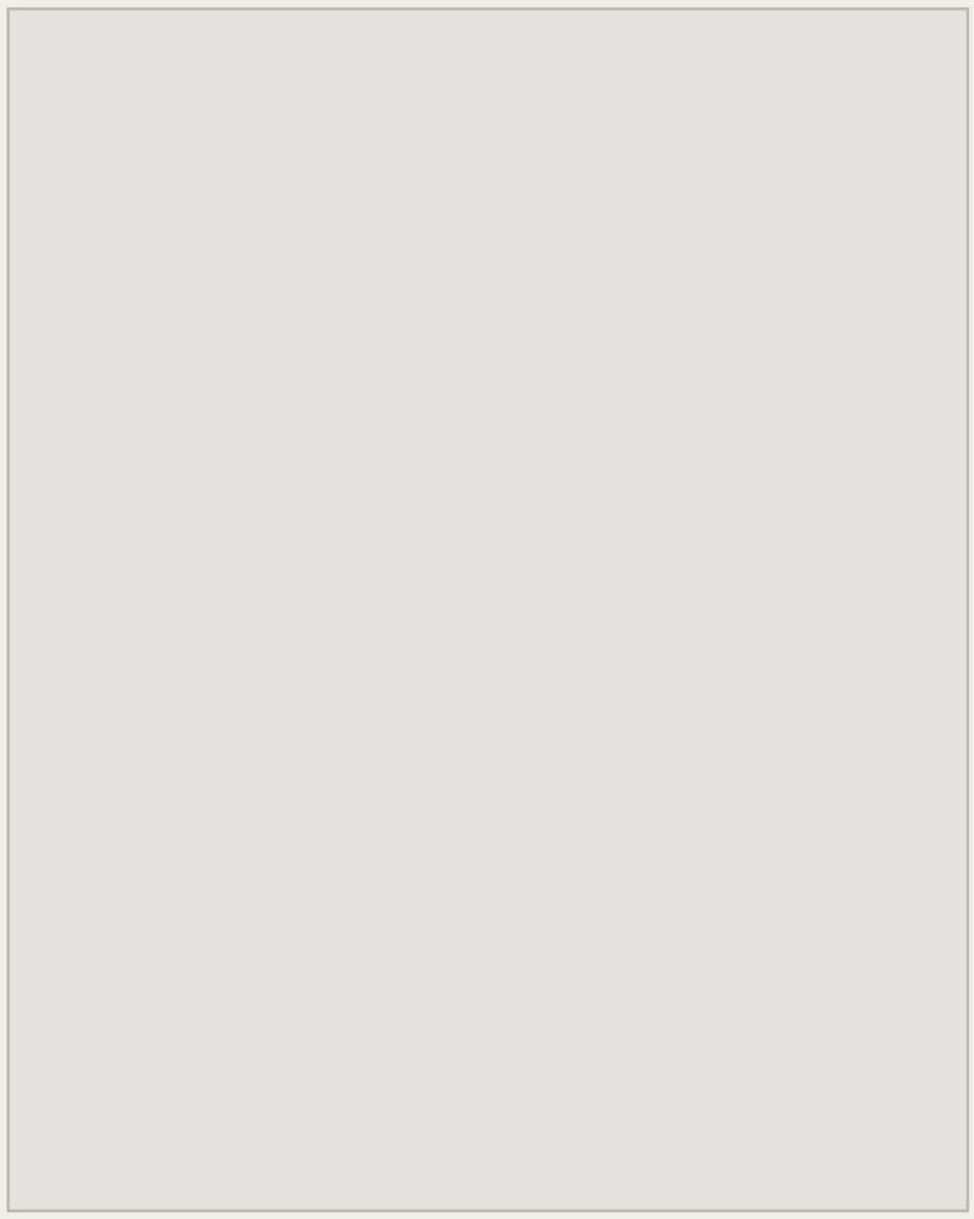

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.

WORK

CONTACT

Tell us what’s going on.

One of us writes back to set up a 30-minute call. No sales rep, no pitch deck.
