Site review — the intro: its new line, one ELORRO, no specks, the black sliding off to the left

2026-10-29 · branch kozmoz-v1 · dev server (localhost:3100), Playwright Chromium · desktop 1440×900 and phone 390×844 at 2× (header close-ups at 2× and 3×). Full pages: reduced motion, so everything is settled (the phone's Work is then the row to swipe; the pin has its own page). Intro frames: the page's clock slowed 12× and stopped for each capture, stamped in the page's own ms. Pin frames: real time, loops on.

This round · the intro

- The line reads exactly: “Two people who listen first, then build what adds real value to your business.” Desktop Cormorant Garamond 500 27.0px, 2 lines; phone Cormorant Garamond 500 21.0px, 3 lines. Broken by hand so it wraps evenly: “Two people who listen first, then build / what adds real value to your business.” from 768px up (the same two lines down to 768, at 22–27px), and “Two people who listen first, / then build what adds real / value to your business.” on phones (the same three lines from 430 down to 320). Same size, gold, burn, centring and timing.
- One ELORRO: the definition's “elorro” is gone. Other ELORROs on screen while the intro shows: 0 / 0 (desktop / phone, through the hold). In flight, the header's wordmark is hidden and nothing but the flying logo says ELORRO; it only turns into the wordmark's lettering in the last few frames, on the spot.
- No specks: with the mouse moved across the logo, the canvas has drawn 25300 sampled pixels in the logo's band and 0 anywhere else (mode canvas). The motes, their drawing and their code are gone; the logo still bends under the pointer.
- Desktop 1440, the exit: the line out (opacity 0) before it moves; the black 33% across at 3767 ms with the logo at 2.55× above it (z 2), 67% at 3940 ms (1.59×); the edge: filter / mask / shadow none · none · none. The hero began at 3452 ms, as the black started to move. Ended at 4254 ms: overlay gone, header wordmark visible at 1, theme #F4F1EA.
- Phone 390, the exit: the line out (opacity 0) before it moves; the black 33% across at 3767 ms with the logo at 1.98× above it (z 2), 67% at 3940 ms (1.4×); the edge: filter / mask / shadow none · none · none. The hero began at 3452 ms, as the black started to move. Ended at 4252 ms: overlay gone, header wordmark visible at 1, theme #F4F1EA.
- Real time, also checked: a click, key or wheel during the hold goes straight to the page in 250 ms (no slide, no flight), and a key during the slide does the same; reduced motion holds the logo and the line on the black to 2.2 s and fades in 0.6 s, with no slide or flight; with no wordmark to land on, the logo goes off with the black. ?intro and first-visit-only as before.

Page heights (1b31b5c → now)

	Desktop 1440	Phone 390
/	4214 → 4214	4525 → 4525 (with the pin: 6675)
/services	3459 → 3459	4354 → 4354
/services/websites-and-getting-found	3603 → 3603	4852 → 4852
/work	2119 → 2119	4207 → 4207

As at 1b31b5c, re-captured

1 · No panel

- Panel, frosted white and their canvas on 8 page captures: 0 elements (panel.tsx and art.tsx deleted, their CSS gone). Page root padding: 0px. html rgb(244, 241, 234), body rgb(244, 241, 234). Theme colour #F4F1EA.
- Screen edges, scrolled into /services/websites-and-getting-found: desktop 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234; phone 244,241,234 / 244,241,234 / 244,241,234 / 244,241,234 (the paper is 244,241,234).
- Layout and widths kept: the root size is still worked out from the screen less the old margin (15.378px at 1440, 15.616px at 390), and that margin is now part of every side margin, so the page's grid sits at x 143.3–1296.7 (desktop) and 27.6–362.4 (phone), the header's rings at x 58.8 / 27.6: where they were inside the panel. No horizontal scroll: none on any page.

2 · The menu

- Desktop 1440: header links inline 0. Open: a modal dialog (true), rgb(244, 241, 234), sections Us, What we do, Work, Contact in Cormorant Garamond 500 76.9px rgb(22, 19, 15); pages All services (/services), All work (/work); focus on “Close”; page overflow hidden. Escape: open false, focus back on “Menu”, overflow visible.
- Phone 390: header links inline 0. Open: a modal dialog (true), rgb(244, 241, 234), sections Us, What we do, Work, Contact in Cormorant Garamond 500 50.8px rgb(22, 19, 15); pages All services (/services), All work (/work); focus on “Close”; page overflow hidden. Escape: open false, focus back on “Menu”, overflow visible.
- Also checked: Tab and Shift+Tab go round the menu's 8 stops and never leave it; the wheel doesn't scroll the page behind; a section link closes it and scrolls there (/#work); a page link closes it and goes (/work); on /services, “All services” is marked as the current page; on a service page Contact stays on the page.

3 · Header states

- Desktop 1440. Top: rings · ELORRO · menu; black rgb(22, 19, 15) at 0. Scrolled: rings · ELORRO · Ashan · Jordan · & · menu; black rgb(22, 19, 15) at 1, 1440px wide from x 0, corners 0px; names rgb(244, 241, 234) 600 23.1px, “&” gold gradient, wordmark gold gradient, menu button rgb(244, 241, 234) (at the top: rgb(22, 19, 15)). Timing: color 0.25s; black 0.25s; names opacity 0.25s.
- Phone 390. Top: rings · ELORRO · menu; black rgb(22, 19, 15) at 0. On down: steps aside. Back up: rings · A · J · & · menu; black rgb(22, 19, 15) at 1, 390px wide from x 0, corners 0px; names rgb(244, 241, 234) 600 27.3px, “&” gold gradient, wordmark gold gradient, menu button rgb(244, 241, 234) (at the top: rgb(22, 19, 15)). Timing: color 0.25s; black 0.25s; names opacity 0.25s.

4 · Phone Work, pinned

- Pin 2823px tall: the stage (844px, one screen) plus 591px of scroll per card and a short hold after the last; 4 cards. Settles near a card's stop (root scroll snapping: y proximity, stops at 78, 669, 1260, 1850px into the pin).
- Entering: the section reaches the top and pins, card 1: --x 0.0000, card in the middle 1, stage top 0px (pinned), header is-hidden is-dark; loops playing / still (paused) / still (paused) / still.
- Card 2: --x 1.0000, card in the middle 2, stage top 0px (pinned), header is-hidden is-dark; loops still (paused) / playing / still (paused) / still.
- Card 4, the last: --x 3.0000, card in the middle 4, stage top 0px (pinned), header is-hidden is-dark; loops still (paused) / still (paused) / still (paused) / still.
- Released into Contact: --x 3.0000, card in the middle 4, stage top -420px (let go, scrolling up with the page), header is-hidden is-dark; loops still (paused) / still (paused) / still (paused) / still.
- Cubic Ship has no phone cut yet (cubic-m.mp4), so at card 4 nothing plays and its card keeps its still, as it always has on phones.
- Reduced motion on the phone: pin contents, row overflow auto, snapping none (the swipe row, as before). Desktop 1440: pin contents, 2 columns; 768: contents, 1 column (as before). /work untouched.

6 · Last names, centred in each half

- 1440: Fernando's centre -0.01px off the left half's centre (360px), Lopez 0px off the right's (1080px); the “&” 0px off the seam.
- 1920: Fernando's centre 0px off the left half's centre (480px), Lopez 0px off the right's (1440px); the “&” -0.01px off the seam.
- Also measured at 1024, 1280 and 2560: within 0.01px. Under 1024 the names stack, as before: Fernando under Ashan on the left, Lopez under Jordan on the right. Each still writes on with its first name.

Checks

- Lint (eslint .): clean.
- Typecheck (tsc --noEmit, site and video): clean.
- Build (next build): passes, 15 routes.
- Console errors during capture: none.

PICK A NAME TO SEE WHAT EACH OF US DOES

We build the website, shoot the photos and video, and set up the phone answering and booking behind it, for local businesses around the Bay. The two of us do every project ourselves.

TELL US WHAT'S GOING ON

US

The two people on the first call are the two people doing the work.

Based in the Bay Area.

No account managers, no handoffs, nothing farmed out.

We come to you for the shoot.

You own the site, the domain and the data from day one.

A

ASHAN

Ashan. Decides how it looks and how it should feel to use. Plans the shoot and the posts. Then tries to break the site before your customers can.

J

JORDAN

Jordan. Builds it: the site, the booking, the phone answering and the follow-up behind it. Shoots the photos and video.

WHAT WE DO

Websites & getting found.

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

Phones, booking & follow-up.

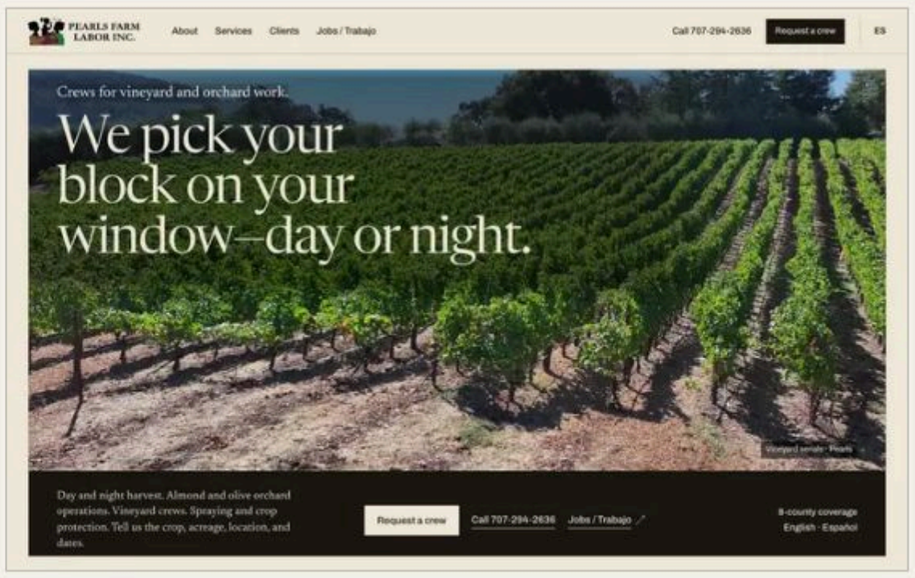

A line that answers when you can’t, booking that fills the calendar, and follow-up that goes out on its own.

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

WHAT WE DO

Websites & getting found.

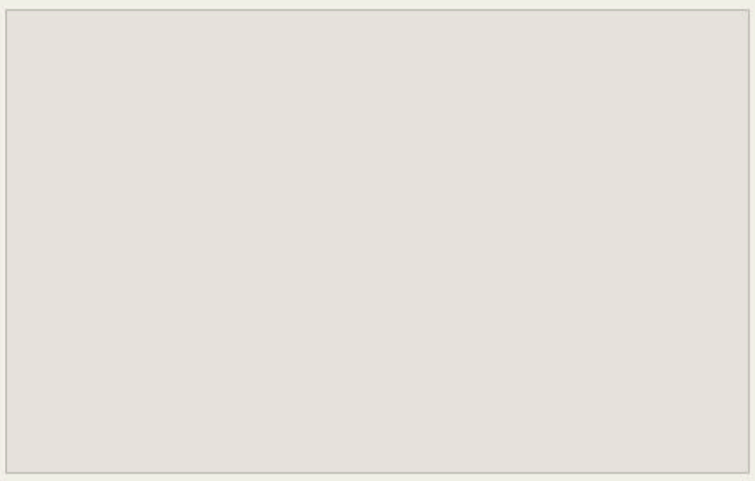

The site itself, and the work that gets it found on Google and in AI search like ChatGPT, so people can call, book or buy.

- Designed around how your customers call, book or buy, on your own domain
- Search done properly: your Google listing, local SEO and the pages behind them
- Set up to show up in AI search, when people ask ChatGPT who to call
- Kept up every month, with what it brings in tracked

Photo & video.

Your place, your people and your work, shot on location and cut for your site, Google and your posts.

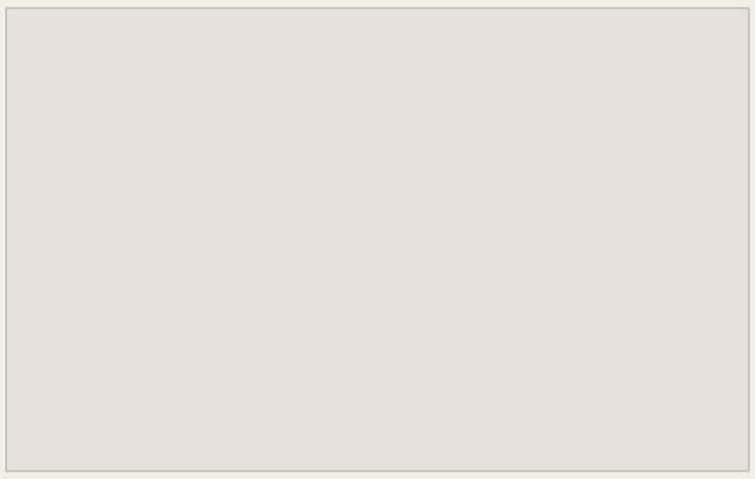

- We come to you for the shoot
- Photos and short video cut for your site, Google and Instagram
- New content every month, so your pages don't go stale

Phones, booking & follow-up.

A line that answers when you can't, booking that fills the

- A line that answers when you can't and books the appointment
- Booking tied into how you already schedule
- Reminders and follow-up texts that go out without anyone

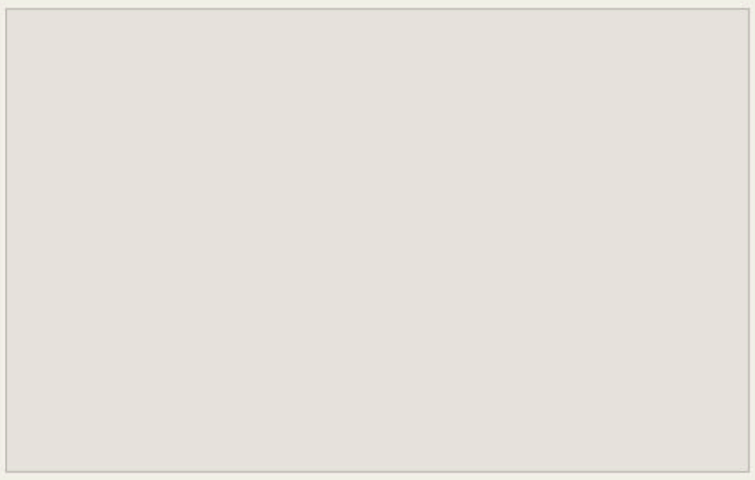

calendar, and follow-up that goes out on its own.

Reminders and follow-up texts that go out without anyone having to remember

Custom tools.

When the problem is particular to your business, we build the tool for it, around how you already work.

- Built for one problem in your business, not a generic app
- Fits the tools and records you already use
- Tested with your team before anyone relies on it
- Looked after once it's live, and changed as you change

How it starts

1

A 30-minute call.

You tell us where it's going wrong, in your words.

2

A one-page plan.

What we'd fix first and what it costs, sent by the day we say.

3

The shoot and the build.

The two of us, start to finish.

There are no prices on this site. Every business is different, so your price comes in your plan, after the call.

TELL US WHAT'S GOING ON

SERVICES

Websites & getting found.

People find a local business three ways now: a Google search, the map, or asking an AI like ChatGPT. We build the site and do the work behind it so you show up in all three, and so whoever finds you can call, book or buy without hunting for how.

Designed around how your customers call, book or buy, on your own domain	Search done properly: your Google listing, local SEO and the pages behind them	Set up to show up in AI search, when people ask ChatGPT who to call	Kept up every month, with what it brings in tracked

WHAT WE DO

01 THE SITE

A site built around how your customers call, book or buy.

We start from what people come to you for and what they do next, and design the pages around that. Fast on phones, on your own domain, and yours: the site, the domain and the data are in your name from day one.

02 GOOGLE

Showing up on Google and on the map.

Your Google listing set up and kept current: hours, photos, services, replies to reviews. On the site, local search done properly: a clear page for each thing you do and each place you do it, so Google knows when to show you.

03 AI SEARCH

Showing up when people ask ChatGPT.

More people now ask an AI who to call. Its answers come from what the web says about you, so we make sure your site says plainly what you do, where and for whom, and that

your listings everywhere else agree with it.

04 FOUND, CALLED, BOOKED

From the search to the booking, with nothing in the way.

Being found only counts once it turns into a call or a booking. Tap to call and book sit where people look for them, and every call and form is tracked, so you can see where each customer came from.

05 EVERY MONTH

Kept up, not handed off and forgotten.

We stay on it every month: new pages and photos as the business changes, search checked and tuned, and what came in, and from where, where you can see it.
